# SCHEME OF EXAMINATIONS

## Semester 1

Exam Slot	Course No:	Name	L- T - P	Internal Marks	End Semester Exam		Credits
					Marks	Duration (hrs)	
A	<b>07MA6007</b>	Applied Mathematics For Biotechnology	4-0-0	40	60	3	4
B	<b>07BT6203</b>	Molecular Biology & Immunotechnology	4-0-0	40	60	3	4
C	<b>07BT6205</b>	Fermentation & Enzyme Engineering	4-0-0	40	60	3	4
D	<b>07BT6207</b>	Advanced Bioinformatics	3-0-0	40	60	3	3
E	<b>07BT6209X</b>	Elective I	3-0-0	40	60	3	3
	<b>07GN6001</b>	Research Methodology	0-2-0	100	0	0	2
	<b>07BT6213</b>	Immunology & Molecular Biology	0-0-2	100	0	0	1
<b>Total Credits :21</b>							

**Semester : 2**

Exam Slot	Course No:	Name	L- T - P	Internal Marks	End Semester Exam		Credits
					Marks	Duration (hrs)	
B	<b>07BT6204</b>	Analytical Techniques in Biotechnology	3-0-0	40	60	3	3
C	<b>07BT6206</b>	Transport phenomena in Bioprocess system	3-0-0	40	60	3	3
D	<b>07BT6208X</b>	Elective II	3-0-0	40	60	3	3
E	<b>07BT6210X</b>	Elective III	3-0-0	40	60	3	3
	<b>07BT6212</b>	Seminar	1-0-0	100	0	0	2
	<b>07BT6214</b>	Mini Project	0-0-4	100	0	0	2
	<b>07IB6116</b>	Lab	0-0-2	100	0	0	1
<b>Total Credits : 21</b>							

**Semester : 3**

Exam Slot	Course No:	Name	L- T - P	Internal Marks	End Semester Exam		Credits
					Marks	Duration (hrs)	
A	<b>07BT7201X</b>	Elective IV	3-0-0	40	60	3	3
B	<b>07BT7203X</b>	Elective V	3-0-0	40	60	3	3
	<b>07BT7205</b>	Seminar	0-0-2	100	0	0	2
	<b>07BT7207</b>	Project (Phase 1)	0-0-12	50	0	0	6
<b>Total Credits :14</b>							

**Semester : 4**

Exam Slot	Course No:	Name	L- T - P	Internal Marks	End Semester Exam		Credits
					Marks	Duration (hrs)	
	<b>07BT7202</b>	Project (Phase 2)	0-0-21	100	0	0	12
<b>Total credits: 12</b>							

L- Lecture, T –Tutorial, P-Practical

**TOTAL CREDITS: 68**

# LIST OF ELECTIVE COURSES OFFERED

## Semester I

### **ELECTIVE: I**

- 07BT62091-** Clinical Biotechnology
- 07BT62093-** Biopharmaceutical & Pharmaceutical Technology
- 07BT62095-** Biopolymer Technology
- 07BT62097-** Protein Engineering

## Semester II

### **ELECTIVES: II**

- 07BT62082-** Bioprocess Models: Design and Stability
- 07BT62084-** Food Processing Technology
- 07BT62086-** Metabolic Engineering
- 07BT62088-** Bioprocess Modeling & Simulation

### **ELECTIVES: III**

- 07BT62102-** Molecular Diagnostics
- 07BT62104-** Bioreactor Design
- 07BT62106-** Genomics & Proteomics
- 07BT62108-** Bio-fuel Engineering

## Semester III

### **ELECTIVES: IV**

- 07BT72011-** Advanced Bio separation Techniques
- 07BT72013-** Intellectual Property Rights (IPR) for a Global Bio-economy
- 07BT72015-** Molecular Modeling & Drug Discovery
- 07BT72017-** Fundamentals of synthetic biology

### **ELECTIVES: V**

- 07BT72031-** Tissue Engineering & Biomaterials
- 07BT72033-** Nano-biotechnology
- 07BT72035-** Management, Entrepreneurship & Bio-business
- 07BT72037-** Structural Biology

# **FIRST SEMESTER**

**Course No: 07MA6007**

**Course Title: APPLIED MATHEMATICS FOR BIOTECHNOLOGY**

**Credits: 4-0-0:4**

**Year :2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To facilitate the student with necessary helping tools and to understand the design aspects and the kinetic parameters.*

**Course Content/ Syllabus :**

Finding a basic feasible solution, testing for optimality for transportation problems. Newton's forward and backward interpolation formula. Probability & Statistics, Baye's theorem. Sampling distributions. Testing of Null hypothesis and testing errors. Curve fitting, Correlation and Regression. Design of experiments : Principles of experimentations. Cluster analysis and trees, ANOVA.

**Course Outcome:**

- *The student will be able to have basic knowledge in fields of transportation, interpolation, probability, statistics, curve fitting and design of experiments.*
- *The student will also be able to apply in biological sciences.*

**Text Books:**

1. Introduction to Numerical Analysis (Second Edition), By Hildebrand F.B., Dover Publications, 1987.
1. Richard A Johnson, CB Gupta, Miller and Freund's, 'Probability and statistics for engineers', 7th edition, Pearson education.

**References**

1. Higher Engineering Mathematics 37th edition. By Grewal.
2. Numerical methods, By Kandasamy P., Thilagavathy K., Gunavathy K., S. Chand & Co., 2003.
3. Optimization methods in Operations research and Systems analysis, By Mital K.V. and Mohan C., New Age Publications, 1996.
4. Fundamentals of Operations research, By Ackoff and Sasieni, M.W., Wiley, 1968.
5. Operations Research, By Verma A.P., Kataria and sons, 2001.
6. Comprehensive Statistical methods By P. N arora, Sumeet Arora, S. Arora. S Chand & Co.
7. Advanced Engineering Mathematics, By E. Kreyszig 8th Edition.
8. Mathematical Statistics, By V C Kapoor & Gupta

## COURSE PLAN

<b>COURSE NO: 07MA6007</b> <b>COURSE TITLE: APPLIED MATHEMATICS FOR BIOTECHNOLOGY</b> <b>(L-T-P : 4-0-0) CREDITS:4</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE: 1</b> Transportation: Introduction, transportation problems, finding a basic feasible solution, testing for optimality, Assignment problems.	13	15
<b>MODULE: 2</b> Interpolation: Introduction, Newton's forward interpolation formula for equal intervals, Newton's backward interpolation formula, error in polynomial	13	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Probability & Statistics: Probability –n Addition theorem, Multiplication theorem and conditional probability – Baye's theorem.	7	15
<b>MODULE: 4</b> Sampling distributions – Large samples and Small samples. Testing of Null hypothesis- Z test, <i>t</i> Test, student <i>t</i> test, paired <i>t</i> test, and $\chi^2$ test. Type I and Type II errors. Fishers F test. Goodness of fit. Taguchi's statistical methods.	8	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Curve fitting: Curve fitting – fitting a straight line and second degree curve. Correlation and Regression; $R^2$ . Fitting a non linear curve. Bivariate correlation application to biological sciences.	7	20
<b>MODULE:6</b> Design of experiments: Principles of experimentations. One way – Two way classifications- Randomized Block designs – Latin Square Designs, Factorial experiment. Multivariate analysis, cluster analysis and trees, ANOVA	8	20
<b>END SEMESTER EXAMINATION</b>		

## ACADEMIC ASSESSMENT/EVALUATION

		<u>Maximum marks :100</u>
<b>Internal Assessment</b>	Internal Exam 1	15
	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT6203**

**Course Title: MOLECULAR BIOLOGY AND IMMUNOTECHNOLOGY**

**Credits: 4-0-0:4**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Aims for preparing the students for a career in applied research in molecular biology & immunology in therapeutic and technological innovations*

**Course Content/ Syllabus:**

Organization of Nucleic Acids & Gene Expression. Replication in Prokaryotes and Eukaryotes. Transcription, translation, posts translational Modifications. Recombinant DNA Technology & Applications. Enzymes in Genetic Engineering. The hybridization reaction. Construction of Genomic and cDNA libraries and screening. Biology of complement systems. Purification of mononuclear cells from peripheral blood. Regulation of gene expression. Vaccines. Immune diagnosis of Infectious diseases - immuno screening of recombinant library.

**Course Outcome:**

1. *To understand the fundamental principles behind nucleic acids organization and gene expression.*
2. *To gain in depth knowledge in rDNA technology, immunotechnology and its applications.*

**Text Books:**

1. David Friefelder, *Molecular Biology (2e)*, Jones and Bartlett Publishers Inc, 1987.
2. Primrose S.B and R. W. Old, *Principles of gene manipulation - An introduction to genetic engineering (Vol. 2)*, Blackwell Scientific Publications, 1980.

3. Immunology, Richard A. Goldsby, Thomas J. Kindt. Barbara, A. Osborne, Janis Kuby  
5th Edition, 2003. W. H. Freeman & Company.

4. Immunology, L.M. Roitt, J. Brestoff and D.K. Male, 1996.

**References:**

1. Walker J.M and R.Rapley, *Molecular Biology and Biotechnology*, Indian Reprint  
byPanima Publishing Corporation, 2000.

2. Sambrook J et al, *Molecular Cloning (Vol I, II and III)*, Cold Spring Harbor  
Laboratory(CSHL) Press, 1989

3. Immuno-biology, Janeway CA and Paul Travers 1994.

4. Immunological techniques, D.M. Weir, 1992

**COURSE PLAN**

<b>COURSE NO: 07BT6203</b> <b>COURSE TITLE: MOLECULAR BIOLOGY AND IMMUNOTECHNOLOGY</b> <b>(L-T-P : 4-0-0) CREDITS:4</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Organization of Nucleic Acids & Gene Expression:Structure and Different forms of DNA and RNA, Organization of DNA in Prokaryotic and Eukaryotic Chromosomes. DNA Replication in Prokaryotes and Eukaryotes, Telomeric Replication in Eukaryotes. Transcription, translation, posts translational Modifications.	8	15
<b>MODULE: 2</b> Recombinant DNA Technology & Applications: Introduction to cloning, Method of creating recombinant DNA molecules, Cloning Vectors, Expression Vectors. Enzymes in Genetic Engineering. The hybridization reaction, Production and Labeling of Gene Probes, Southern Blotting, Northern Blotting, in situ hybridization.	8	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Construction of Genomic and cDNA libraries and screening. Applications of Recombinant DNA Technology as Diagnostic Tools- SNPs, VNTRs, Drugs and Therapies- Therapeutic proteins from Transgenic plants and animals, Gene Therapy Combating Disease. DNA fingerprinting, Directed mutagenesis, Antisense Technology.	7	15
<b>MODULE: 4</b> Biology of complement systems - structure and function of MHC class I and II molecules - antigen recognition and presentation - humoral and Cell mediated immune responses - hypersensitivity reaction - immune suppression and immune tolerance - auto immune disorders. antigen - antibody reaction in immunodiagnostic; hybridoma and monoclonal antibody production; - human monoclonal antibodies; catalytic antibodies - complement fixation.	14	15

<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Purification of mononuclear cells from peripheral blood .fluorescent activated cell sorter - mitogen and antigen induced lympho-proliferation assay - cell mediated lympholysis - mixed lymphocyte reaction. - macrophage cultures and macrophage activation .	10	20
<b>MODULE : 6</b> Regulation of gene expression- The Operon Concept – Promoter, Operator, Terminator, Attenuator, Inducer, Repressor, Effect of cAMP Complex; lac operon.DNA Repair, Mutagenesis and Mutations. generation of T cell clones - HLA typing. Biology and assay of cytokines. Vaccines. Immune diagnosis of Infectious diseases - immuno screening of recombinant library.	9	20
<b>END SEMESTER EXAMINATION</b>		

### ACADEMIC ASSESSMENT/EVALUATION

		<u>Maximum marks :100</u>
<b>Internal Assessment</b>	Internal Exam 1	15
	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT6205**

**Course Title: FERMENTATION AND ENZYME ENGINEERING**

**Credits: 4-0-0:4**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Aims at transformation and industrialization of industrial enzyme,*
- *New technical innovation of fermentation engineering,*
- *High expression and mass preparation of proteins.*

**Course Content/ Syllabus:**

Fermentation & processing. Medium requirements for fermentation process Kinetics of substrate utilization, product formation and biomass production. Simple unstructured kinetic Models for microbial growth Structured kinetic Models. The production of some commercially important Organic acids, amino acids and alcohols, study of production

processes for various classes of low molecular weight secondary metabolites. Principles of enzyme catalysis. Industrial utilization of enzymes.

**Course Outcome:**

1. To familiarise the fermentation and processing techniques
2. To understand the kinetics of substrate utilization, product formation and biomass production

**Text Books:**

1. Cruger.W and A.Cruger, *A Textbook of Industrial Microbiology (2e)*, Sinauer Associates, Sunderland,US, 2004.
2. Michael Shuler and FikretKargi, *Bioprocess Engineering: Basic Concepts (2e)*, Prentice Hall, Englewood Cliffs, NJ, 2002.

**References:**

1. Stryer.L, *Biochemistry (4e)*, Freeman, 2002.
2. Bailey .J.E and D. F. Ollis, *Biochemical Engineering Fundamentals (2e)*, Mc-Graw Hill, Inc., 1986.
3. Pauline M Doran, *Bioprocess engineering principles (1e)*, Academic Press, 1995.
4. Principles of Biochemistry, AL. Lehninger, D.L. Nelson and M. M. Cox. 1993. Worth Publishers, New York

**COURSE PLAN**

<b>COURSE NO: 07BT6205</b> <b>COURSE TITLE: FERMENTATION AND ENZYME ENGINEERING</b> <b>(L-T-P : 4-0-0) CREDITS:4</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE: 1</b> Fermentation& processing: Introduction to fermentation technology: Upstream and downstream processing of biomolecules. Isolation, Preservation and Improvement of Industrial Micro-Organisms; Medium requirements for fermentation process; Criteria for good medium; Sterilization - batch and continuous heat sterilization of liquid media, filter sterilization of liquid media and Air. Design of sterilization equipment.	14	15
<b>MODULE: 2</b> Kinetics of substrate utilization, product formation and biomass production: Phases of cell growth in batch cultures - transient growth kinetics, Simple unstructured kinetic Models for microbial growth, Growth of filamentous organisms; Environmental conditions affecting growth kinetics, substrate and	8	15

product inhibition on cell growth and product formation		
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Structured kinetic Models, segregated kinetic Models of growth. Production of primary and secondary metabolites. The production of some commercially important Organic acids, amino acids and alcohols, study of production processes for various classes of low molecular weight secondary metabolites: Antibiotics, quinones, aromatics, Vitamins and Steroid.	8	15
<b>MODULE : 4</b> Principles of enzyme catalysis: Proteins as enzymes; Classification of Enzymes; Mechanism of Enzyme Action; Determination of elementary step rate kinetics, patterns of substrate concentration dependence, Modulation and regulation of enzyme activity .	10	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Industrial application of enzymes:Immobilized enzymes - principles & techniques of immobilization - commercial production of enzymes; amylases, proteases, cellulose, artificial enzymes, Enzyme Modification - site directed mutagenesis; immobilized enzyme in industrial processes.	8	20
<b>MODULE: 6</b> Structure and function of coenzyme - reactions involving TPP, pyrodoxal phosphate, nicotinamide, flavin nucleotide, coenzyme A and biotin. Industrial utilization of enzymes, food, detergents, energy, waste treatment, pharmaceuticals and medicine.	8	20
<b>END SEMESTER EXAMINATION</b>		

### ACADEMIC ASSESSMENT/EVALUATION

		<u>Maximum marks :100</u>
<b>Internal Assessment</b>	Internal Exam 1	15
	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT6207**

**Course Title: ADVANCED BIOINFORMATICS**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Basic Knowledge in Bioinformatics**

**Course Objectives:**

- *Provide critical tools for managing the immense volume of biological data and increase the efficiency of drug discovery and development.*

**Course Content/ Syllabus:**

Scope of Bioinformatics, Applications in various fields. Databases, Hidden Markov Models. Applications. Information retrieval from biological databases. Programming skills in Bioinformatics and PERL. Comparative genomics. Phylogenetic analysis, Sequence annotation: principles of genome annotation- annotation tools & resources. Virtual screening and compound ranking/scoring. Receptor-ligand interactions analysis. Scaffold hopping, 3D database screening. Explicit/implicit solvation Models

**Course Outcome:**

- 1. To familiarise with the algorithms working behind Bioinformatics software.*
- 2. To improve the programming skills in Perl programming..*

**Text Books:**

1. Bioinformatics, David.W.Mount
2. Essential Bioinformatics, Jin Xion

**References:**

1. Bioinformatics, Andreas D. Baxevanis
2. Perl for Bioinformatics, James Tisdall

**COURSE PLAN**

<b>COURSE NO: 07BT6207</b>		
<b>COURSE TITLE: ADVANCED BIOINFORMATICS</b>		
<b>(L-T-P : 2-1-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Scope of Bioinformatics, Applications in various fields, Types of Databases, Hidden Markov Models. Applications: Modeling	5	15

Protein sequence families, multiple alignments.		
<b>MODULE: 2</b> Nucleotide databases, Protein databases, specialized databases, Disease databases, information retrieval from biological databases.	5	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Programming skills in Bioinformatics, PERL: Introduction and basics of PERL, variables, numbers, operators, loops, Arrays, Hashes, Control structures, File handling, strings manipulations, regular expressions.	10	15
<b>MODULE: 4</b> Comparative genomics, Motif representation: consensus, regular expressions; PSSMs; phylogenetic analysis-steps in phylogenetic analysis, Sequence annotation: principles of genome annotation- annotation tools & resources.	10	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Virtual screening and compound ranking/scoring. Receptor-ligand interactions analysis, Fragment-based design, <i>de novo</i> design (LUDI), Pharmacophore generation (Catalyst).	6	20
<b>MODULE: 6</b> Scaffold hopping, 3D database screening. Explicit/implicit solvation Models, Protein Modeling (MODELER®) and analysis. Protein-protein docking and refinement.	6	20
<b>END SEMESTER EXAMINATION</b>		

### ACADEMIC ASSESSMENT/EVALUATION

		<u>Maximum marks :100</u>
<b>Internal Assessment</b>	Internal Exam 1	15
	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07GN6001`**

**Course Title: RESEARCH METHODOLOGY**

**Credits: 0-2-0:2**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

*The main objective of the course is to provide a familiarization with research methodology and to induct the student into the overall research process and methodologies. This course addresses:*

- *The scientific research process and the various steps involved*
- *Formulation of research problem and research design*
- *Thesis preparation and presentation.*
- *Research proposals, publications and ethics*
- *Important research methods in engineering*

*As a tutorial type course, this course is expected to be more learner centric and active involvement from the learners are expected which encourages self study and group discussions. The faculty mainly performs a facilitator's role.*

**Course Content/ Syllabus:**

Overview of research methodology - Research process, scientific method, research design process.

Research Problem and Design - Formulation of research task, literature review, web as a source, problem solving approaches, experimental research, and ex post facto research.

Thesis writing, reporting and presentation -Interpretation and report writing, principles of thesis writing- format of reporting, oral presentation.

Research proposals, publications and ethics - Research proposals, research paper writing, considerations in publishing, citation, plagiarism and intellectual property rights.

Research methods – Modelling and Simulation, mathematical modeling, graphs, heuristic optimization, simulation modeling, measurement design, validity, reliability, scaling, sample design, data collection methods and data analysis

**Course Outcome:**

*At the end of course, the student will be able to:*

- *Discuss research methodology concepts, research problems, research designs, thesis preparations, publications and research methods.*
- *Analyze and evaluate research works and to formulate a research problem to pursue research*
- *Prepare a thesis or a technical paper, and present or publish them*

- Apply the various research methods followed in engineering research for formulation and design of own research problems and to utilize them in their research project.

- **Text Books:**

1. David Friefelder, *Molecular Biology (2e)*, Jones and Bartlett Publishers Inc, 1987.
2. Primrose S.B and R. W. Old, *Principles of gene manipulation - An introduction to genetic engineering (Vol. 2)*, Blackwell Scientific Publications, 1980.
3. Immunology, Richard A. Goldsby, Thomas J. Kindt. Barbara, A. Osborne, Janis Kuby 5th Edition, 2003. W. H. Freeman & Company.
4. Immunology, L.M. Roitt, J. Brestoff and D.K. Male, 1996.

- 6 Sambrook J et al, *Molecular Cloning (Vol I, II and III)*, Cold Spring Harbor Laboratory(CSHL) Press, 1989
7. Immuno-biology, Janeway CA and Paul Travers 1994.
- 8 Immunological techniques, D.M. Weir, 1992

**COURSE PLAN**

<b>COURSE NO: 07GN6001</b> <b>COURSE TITLE: RESEARCH METHODOLOGY</b> <b>(L-T-P : 0-2-0) CREDITS:2</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE 1 Overview of Research Methodology</b> Research concepts – meaning – objectives – motivation - types of research –research process – criteria for good research – problems encountered by Indian researchers - scientific method - research design process – decisional research	5	10
<b>MODULE 2 Research Problem and Design</b> Formulation of research task – literature review – methods – primary and secondary sources – web as a source –browsing tools -formulation of research problems – exploration - hypothesis generation - problem solving approaches-introduction to TRIZ(TIPS)-experimental research – principles -Laboratory	5	10

experiment - experimental designs - ex post facto research - qualitative research		
<b>FIRST INTERNAL TEST</b>		
<b>MODULE 3 Thesis writing, reporting and presentation</b> Interpretation and report writing – techniques of interpretation – precautions in interpretation – significance of report writing – principles of thesis writing- format of reporting - different steps in report writing – layout and mechanics of research report - references – tables – figures – conclusions. oral presentation – preparation - making presentation – use of visual aids - effective communication	7	15
<b>MODULE 4 Research proposals, publications, ethics and IPR</b> Research proposals - development and evaluation – research paper writing – layout of a research paper - journals in engineering – considerations in publishing –scientometry-impact factor- other indexing like h-index – citations - open access publication -ethical issues - plagiarism –software for plagiarism checking- intellectual property right- patenting case studies	14	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE 5 Research methods – Modelling and Simulation</b> Modelling and Simulation – concepts of modelling – mathematical modelling - composite modelling – modelling with – ordinary differential equations – partial differential equations – graphs heuristics and heuristic optimization - simulation modelling	5	10
<b>MODULE 6 – Research Methods – Measurement, sampling and Data acquisition</b> Measurement design – errors -validity and reliability in measurement - scaling and scale construction - sample design - sample size determination - sampling errors - data collection procedures - sources of data - data collection methods - data preparation and data analysis	4	10
<b>THIRD INTERNAL TEST</b>		

**Internal continuous assessment: 100 marks**

Internal continuous assessment is in the form of periodical tests and assignments. There are three tests for the course (3 x 20 = 60 marks) and assignments (40 marks). The assignments can be in the form of seminar, group tasks, case studies, research work or in a suitable format as decided by the teacher. The assessment details are to be announced to students at the beginning of the semester by the teacher.

**Course No: 07BT6213**

**Course Title: IMMUNOLOGY AND MOLECULAR BIOLOGY LAB**

**Credits: 0-0-2:2 ,Year :2015**

**Pre-requisites: Nil**

**Objectives:**

- *To provide hands on training towards the application of molecular techniques and products of industrial importance*

**Course Content/ Syllabus**

1. Isolation ,estimation and electrophoresis of DNA from organisms
2. Isolation of plasmid and quantification
3. Isolation of RNA and quantification
4. Restriction digestion
5. purification of DNA from gel and Ligation
6. Competent cell preparation and Transformation
7. Conjugation in E.coli
  - Phage infection in E.coli
8. Induction of Lac operon.
9. Protein Isolation and estimation from microbes
10. Separation of lymphocytes from blood and staining of blood cells
11. Antigen antibody interaction-Haemagglutination, Immunodiffusion, Immunoelectrophoresis
12. Immunoprecipitation
13. Enzyme linked Immunosorbant Assay(ELISA)
14. Isolation of Immunoglobulins and quantification
15. Western blotting

**References:**

1. Practical immunology-Frank C HayandOlwyn M R Westwood Blackwell science
2. Manual of immunological methods- Pauline Brousseau.

**Internal Continuous Assessment (Maximum Marks-100)**

- i) Practical Records /outputs – 40 Marks
- ii) Regular Class Viva-Voce - 20 Marks
- iii) Final Test (Objective) – 20 Marks

# **SECOND SEMESTER**

**Course No: 07BT6202**

**Course Title : ANIMAL & PLANT CELL CULTURE**

**Credits: 4-0-0:4**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *An introduction to plant and animal cell tissue culture techniques, nucleic acid transfections and industrial applications of cell culture.*

**Course Content/ Syllabus:**

Plant tissue culture techniques, preparation of tissue culture media, gene transfer method in plants, plant regeneration from embryo, meristem and callus culture. Androgenesis: Anther and pollen culture history of animal cell culture development, Different type of cell culture media, cell lines, characterization and maintenance of cell lines Animal tissue and Organ culture- Products and their Applications.

**Course Outcome:**

- 1. Describe how cell culture can be used for in vitro studies and commercial applications.*
- 2. Identify the problems associated with growing, storing and identifying a wide range of different cell types.*

**Text Books:**

1. Dodds J.H. Plant Genetic Engineering, Cambridge University Press.
2. Freshney RI. 2005. *Culture of Animal Cells*. Wiley Liss.
3. Portner R. 2007. *Animal Cell Biotechnology*. Humana Press

**References:** \_

## COURSE PLAN

<b>COURSE NO: 07BT6202</b> <b>COURSE TITLE: ANIMAL &amp; PLANT CELL CULTURE</b> <b>(L-T-P : 4-0-0) CREDITS:4</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE: 1</b> Fundamentals of plant tissue culture, plant regeneration: organogenesis. Somatic embryogenesis; somaclonal variation, its genetic basis and application in crop improvement. Cell/callus line selection for resistance to herbicide, stress and diseases. Role of tissue culture in rapid clonal propagation, production of pathogen - free plants and "synthetic seeds"; haploid production: advantages and methods.	10	15
<b>MODULE: 2</b> Protoplast technology: isolation, culture and plant regeneration, protoplast fusion, identification and characterization of somatic hybrids, applications of protoplast technology. Specific gene transfer: indirect and direct methods, current status and limitations. Automation in plant tissue culture. Field techniques for propagation of regenerated plants	8	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3</b> Explant selection, sterilization and inoculation; Various media preparations; MS, B5, SH PC L-2; Callus and cell suspension culture; Induction and growth parameters; Chromosomal variability in callus culture. Plant regeneration from embryo, meristem and callus culture. Androgenesis: Anther and pollen culture; Isolation and culture of protoplasts. Vectors in plant biotechnology	8	15
<b>MODULE : 4</b> Introduction, importance, history of animal cell culture development, different tissue culture techniques including primary and secondary culture, continuous cell lines, suspension culture, organ culture etc. Different type of cell culture media, growth supplements, serum free media balanced salt solution, other cell culture reagents.	10	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Culture of different tissues and its application. Behavior of cells in culture conditions, division, their growth pattern, metabolism of estimation of cell number, Development of cell lines, characterization and maintenance of cell lines, stem cells, cryopreservation, common cell culture contaminants.	10	20

**MODULE: 6** Animal tissue and Organ culture- Plasma clot method, Raft method, Agar-gel method, Grid method, etc. Cyclic exposure to Medium and Gas phase, Advantages, limitations and applications, artificial skin. Products and their Applications, Transgenics and Prospectives, Principles of *invitro* fertilization

**Course No: 07BT6204**

**Course Title: ANALYTICAL TECHNIQUES IN BIOTECHNOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Integrate the theory and practice for analyzing and quantitating biomolecules obtained from various sources*

**Course Content/ Syllabus:**

Development and application of Modern analytical instrumentation, Protein separation techniques and its detection methods .Hybrid techniques, Immunoassay, Advanced analytical techniques, Lab on chip

**Course Outcome:**

1. *Explain the working of modern analytical instruments and use them effectively in their research work.*
2. *Instrumentation in quality assessment of biological and pharmaceuticals*

**Text Books:**

1. Practical Biochemistry – Wilson and Walker.
2. Handbook of analytical separations, vol. 4, by Ian Wilson, 2003
3. Encyclopedia of spectroscopy and spectrometry, vol. 1-3, 2000
4. Methods of biochemical Analysis, Vol. 35, Clarence Suelter, 1991
5. Methods of biochemical Analysis, Vol. 36, Clarence Suelter, 1991

**References:**

1. Understanding NMR Spectroscopy by James Keeler
2. Basic One- and Two-Dimensional NMR Spectroscopy Paperback – Import, 27 Oct 2010 by Horst Friebolin
3. Fundamentals of Microfluidics and Lab on a Chip for Biological Analysis and Discovery  
By Paul C.H. Li

**COURSE PLAN**

<b>COURSE NO: 07BT6204</b> <b>COURSE TITLE: ANALYTICAL TECHNIQUES IN BIOTECHNOLOGY</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Development and application of Modern analytical instrumentation. Electrophoresis, Chromatography: HPLC and detection methods	6	15
<b>MODULE: 2</b> UPLC, GC, HPTLC, Ion exchange chromatography, gel filtration chromatography and detection methodologies.	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3</b> Hybrid techniques: Gas chromatography with Fourier transforms infra red spectroscopic detection(GC-FTIR), gas chromatography with mass spectrometric detection(GC-MS)	8	15
<b>MODULE: 4</b> Liquid chromatography with mass spectrometric detection(LC-MS and LC-MS/MS), and inductively coupled plasma with mass spectrometric detection(ICP-MS).	10	15

<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Immunoassay: radioimmunoassay (RIA); enzyme-multiplied immunoassay technique (EMIT); fluorescence polarization immunoassay(FPIA); closed enzyme donor immunoassay (CEDIA);enzyme-linked immunosorbent assay (ELISA).	6	20
<b>MODULE : 6</b> Advanced analytical techniques : Application of IR and NMR spectroscopy, Mass spectrometry , Lab on chip	6	20
<b>END SEMSETER EXAMINATION</b>

**Course No: 07BT6206**

**Course Title: TRANSPORT PHENOMENA IN BIOPROCESS SYSTEM**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To understand the balance between momentum, energy and mass in bioprocess systems*

**Course Content/ Syllabus:**

Introduction to Transport Phenomena -Fermentation Broth Rheology-flow regimes in a bioreactor- basic concepts of heat transfer and its application in bioconversions-basic concepts of diffusion-role of diffusion in bioprocessing-Oxygen transport to microbial cultures-determination of oxygen mass transfer coefficient by various method.

**Course Outcome:**

1. *Ability to analyze industrial problems along with appropriate approximations and boundary conditions.*

**Text Books:**

1. Pauline M. Doran, *Bioprocess Engineering Principles*, Academic Press, 1995.
2. Blanch H.W and Douglas S. C, *Biochemical Engineering*, CRC Press, 1997.
3. Michael L Shuler and Fikret Kargi, *Bioprocess Engineering: Basic Concepts*, Prentice-Hall of India Pvt Ltd, 2008.

**References:**

	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT6212**

**Course Title: SEMINAR**

**Credits: 1-0-0:2**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To assess the debating capability of the student to present a technical topic. Also to impart training to a student to face audience and present his ideas and thus creating in him / herself esteem and courage that are essential for an engineer.*
- All students are required to choose a topic of their interest from Industrial Biotechnology and its applications related topics preferably from outside the M.Tech syllabus and give a seminar on that topic about 30 minutes. A committee consisting of at least three faculty members shall assess the presentation of the seminar and award marks to the students. Each student shall submit two copies of a write up of his / her seminar topic. One copy shall be returned to the student after duly certifying it by the Chairman of the assessing committee and the other will be kept in the departmental library. Internal continuous assessment marks are awarded based on the relevance of the topic, presentation skill, quality of the report and participation.

- **Internal continuous assessment: 100 marks**

Marks for the report: 30%

Presentation: 40%

Viva Voce: 30%

**Course No: 07BT6214**

**Course Title: MINI PROJECT**

**Credits: 0-0-4: 2**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- To estimate the ability of the student in transforming the theoretical knowledge studied so far into an application at the basic research level that could lead to an industrial application. For enabling the students to gain experience in organisation and implementation of a small project and thus acquire the necessary confidence to carry out main project in the final year. The basic concepts of product design may be taken into consideration while designing the project. A committee consisting of minimum three faculty members specialised in biotechnology/chemical engineering/instrumentation engineering will perform assessment of the mini project. Students have to submit a report on the mini project and demonstrate the mini project before the evaluation committee.

- **Internal continuous assessment: 100 marks**

Marks for the report: 20%

Demonstration and Presentation: 50%

Results : 30%

**Course No: 07BT6216**

**Course Title: BIOPROCESS & FERMENTATION TECHNOLOGY**

**Credits: 0-0-2:2**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To understand and apply the basic and advanced concepts of fermentation and bioprocess in industry*

**Course Content/ Syllabus:**

1. Isolation of industrially important microbes (Bacteria, Actinomycetes & Fungi) from environment
2. Identification and Culture preservation of industrially important microbes
  - a. Staining techniques (Gram staining & Fungal staining)
  - b. Glycerol stock preparation
3. Production of extracellular enzyme by liquid fermentation and Quantification of enzyme activity and specific activity
4. Kinetics study of enzymes
5. Techniques of enzyme immobilization
6. Production of metabolites by solid state fermentation
7. Strain improvement by non recombinant methods-Physical mutation and chemical mutation
8. Experimental design for improvement of fermentation by Plackett-Burman method
9. Study of Rheology of fermentation broth
10. Determination of volumetric mass transfer coefficient by sodium sulphite oxidation method.
11. Down stream processing :a. Cell rupture ,b. Precipitation,c. Dialysis,d. Chromatography
  - e. Molecular weight determination by SDS PAG

**References:**

1. Practical Fermentation Technology- Brian McNeil, Linda M.Harvey- John Wiley & Sons, Ltd
2. Enzyme Technology Martin F. Chaplin , Christopher Bucke

**Internal Continuous Assessment** (*Maximum Marks-100*)

- i) Practical Records /outputs - 40%
- ii) Regular Class Viva-Voce- 20%
- iii) Final Test (Objective) -40%

# **THIRD SEMESTER**

**Course No: 07BT6212**

**Course Title: SEMINAR**

**Credits: 1-0-0:2**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To assess the debating capability of the student to present a technical topic. Also to impart training to a student to face audience and present his ideas and thus creating in him / herself esteem and courage that are essential for an engineer.*
- All students are required to choose a topic of their interest from Biotech Business and entrepreneurship development related topics preferably from outside the M.Tech syllabus and give a seminar on that topic about 30 minutes. A committee consisting of at least three faculty members shall assess the presentation of the seminar and award marks to the students. Each student shall submit two copies of a write up of his / her seminar topic. One copy shall be returned to the student after duly certifying it by the Chairman of the assessing committee and the other will be kept in the departmental library. Internal continuous assessment marks are awarded based on the relevance of the topic, presentation skill, quality of the report and participation.
- **Internal continuous assessment: 100 marks**

Marks for the report: 30%

Presentation : 40%

Viva Voce : 30%

**Course No: 07BT7207**

**Course Title: PROJECT [PHASE 1]**

**Credits: 0-0-12 : 6**

**Year: 2015**

**Course Objective:**

- *To improve the professional competency and research aptitude by touching the areas which otherwise not covered by theory or laboratory classes. The project work aims to develop the work practice in students to apply theoretical and practical tools/techniques to solve real life problems related to industry and current research.*

The project work can be a purely research based / industry based project which contains and applies the basic and advanced principles of biotechnology as well as chemical engineering. The project work is allotted individually on different topics. The students shall be encouraged to do their project work in the parent institute itself. If it is found essential, they may be permitted to continue their project outside the parent institute subject to the conditions in clause 10 of M.Tech regulations. Department will constitute an Evaluation Committee to review the project work. The Evaluation committee consists of at least three faculty members of which internal guide and another expert in the specified area of the project shall be two essential members.

The student is required to undertake the Masters research project phase-I during the third semester and the same is continued in the 4<sup>th</sup> semester (Phase-II). Phase-I consists of preliminary thesis work, two reviews of the work and the submission of preliminary report. First review would highlight the topic, objectives, methodology and expected results. Second review evaluates the progress of the work, preliminary report and scope of the work which is to be completed in the 4<sup>th</sup> semester.

- **Internal continuous assessment :Marks 50**

Progress evaluation by the Project Supervisor : 20 Marks

Presentation and evaluation by the committee : 30 Marks

# **FOURTH SEMESTER**

**Course No: 07BT7202**

**Course Title: PROJECT [PHASE 2]**

**Credits: 0-0-12 : 6**

**Year: 2015**

**Course Objective:**

- *To improve the professional competency and research aptitude by touching the areas which otherwise not covered by theory or laboratory classes. The project work aims to develop the work practice in students to apply theoretical and practical tools/techniques to solve real life problems related to industry and current research.*

Masters Research project phase-II is a continuation of project phase-I started in the third semester. Before the end of the fourth semester, there will be two reviews, one at middle of the fourth semester and other towards the end. In the first review, progress of the project work done is to be assessed. In the second review, the complete assessment (quality, quantum and authenticity) of the Thesis is to be evaluated. Both the reviews should be conducted by guide and Evaluation committee. This would be a pre qualifying exercise for the students for getting approval for the submission of the thesis. At least one technical paper is to be prepared for possible publication in journal or conferences. The technical paper is to be submitted along with the thesis. The final evaluation of the project will be external evaluation.

- **Internal Continuous Assessment: 100 marks**

Project evaluation by the supervisor/s : 30 Marks

Presentation & evaluation by the Committee : 40 Marks

Evaluation by the External expert : 30 Marks

# **ELECTIVES**

# **ELECTIVE I**

## **07BT6209X**

**Course No: 07BT62091**

**Course Title: CLINICAL BIOTECHNOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To understand the design of Clinical trails and research*
- *To know about some of the important biological , their use and applications in the pharma sector*

**Course Content/ Syllabus:**

Clinical study and design of clinical studies. Epidemiological research and treatment studies. Observational studies: Cohort study- Prospective cohort and Retrospective cohort. Community survey and Ecological study. Seasonal studies. Statistical Analysis and Interpretation: Drug Design and Synthesis. Statistical Application Software. Study of Therapeutic Proteins and Related Case Studies. Cancer Biology and Therapy Clinical Toxicology. Clinical Research Governance and Ethics.

**Course Outcome:**

1. *IDesign and carry out clinical studies*
2. *Statistical analysis and Interpretation of clinical data*

**Text Books:**

1. Pharmaceutical Biotechnology, Second Edition by Michael J. Groves
2. Medical Biotechnology by Judit Pongracz, Mary Keen (2009)
3. Medical Biotechnology by Firdos Alam Khan (2012)

**References:**

1. Leon Lachman etal, *Theory and practice of Industrial Pharmacy*, Lea arid Febiger.
2. Richard B. Silverman, *The Organic Chemistry of Drug Design and Drug Action*, Elsevier, Publications.
3. Rang Dale Riter, *Pharmacology*, Churchill Livingstone

## COURSE PLAN

<b>COURSE NO: 07BT62091</b> <b>COURSE TITLE: CLINICAL BIOTECHNOLOGY</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE: 1</b> <b>Introduction:</b> Introduction to Clinical study and design of clinical studies. Epidemiological research and treatment studies: Double-blind and Single-blind Randomized controlled trial, Non-blind trial, Nonrandomized trial-quasi-experiment.	5	15
<b>MODULE: 2</b> Observational studies: Cohort study- Prospective cohort and Retrospective cohort. Time series study, Case-control study and Nested case-control study. Community survey and Ecological study. Seasonal studies: Conduction of studies in seasonal indications such as Allergies and Influenza.	5	15
FIRST INTERNAL TEST		
<b>MODULE: 3</b> <b>Statistical Analysis and Interpretation:</b> Background and purpose, trial design consideration, Parallel group design, cross over design, factorial design. Introduction to Statistical Application Software (SAS), procedures and clinical data management.	8	15
<b>MODULE: 4</b> <b>Drug Design and Synthesis:</b> Synthesis of compounds in accordance with the molecular structure and biological activity concept: Analgesics, neuromuscular blocking agents, anti-fertility drugs and bactericidal & bacteriostatic agents (sulphonamides, mercury compounds and antiseptics).	6	15
SECOND INTERNAL TEST		
<b>MODULE: 5</b> <b>Clinical Toxicology:</b> Basic concept in toxicology. Types and mechanism of toxin action- Epoxidation& drug toxicity, N-oxidation & drug toxicity and sulphurxenobiotics. Hepatotoxicity and Nephrotoxicity. Biotransformation of toxins, inactivation and removal from the body. Blood bags, storage of blood	10	20
<b>MODULE: 6</b> <b>Clinical Research Governance and Ethics:</b> Overview on regulatory affairs for pharmaceuticals, nutraceuticals and medical devices. Good Clinical Practices (GCP). International quality standard and related guidelines (ICH-E6). Risk assessment and trial monitoring. Legal and ethical issues on biotechnology, medical research and related clinical practice.	8	20

**Course Title: BIOPHARMACEUTICAL & PHARMACEUTICAL TECHNOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Prepare individuals for employment in pharmaceutical manufacturing and related industries*

**Course Content/ Syllabus:**

Pharmaceuticals, biologics and biopharmaceuticals. Pharmacokinetics. ADME. Biopharmaceuticals, pharmaceutical biotechnology. Preclinical Pharmacokinetics. Compartment Modeling. Pre-clinical trials, Clinical trials. Patenting- Patent types. Special Concerns for the Preclinical Evaluation of Biotechnology Products. The drug development and manufacturing process. Regulations for Industries.

**Course Outcome:**

1. *To get acquainted with the basic concepts in pharmaceuticals, biologics and biopharmaceuticals*
2. *To understand the details about pharmacokinetics*
3. *Acquire sufficient knowledge on the functioning of pharma and biopharma industries*

**Text Books:**

1. Heinrich Klefenz, *Industrial pharmaceutical biotechnology*, John Wiley sons, 2002.
2. Susanna Wu-Pong, Yongyut Rojanasakul, and Joseph Robinson, *Biopharmaceutical drug and design and development*, Humana Press, 2007.

**Course No: 07BT62095**

**Course Title: BIOPOLYMER TECHNOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Altering the molecular structure of polysaccharides by enzymatic and chemical means*
- *Help in offering solutions towards technology development for biodegradable polymers*

**Course Content/ Syllabus:**

Biopolymers – The current scenario, Biopolymers and Artificial Biopolymers in Biomedical Applications, an Overview, Novel Synthesis. Preparation and Characterizations, Composite Materials Based on Gelatin and Fillers from Renewable Resources. Biosynthesis and Modifications of xanthum gum, PHA, PHB etc. Bio-surfactants: Source, characteristics and properties. Production of Bio-surfactants. Material Testing and Analytical Methods. Case studies.

**Course Outcome:**

1. *To understand the basic concepts about biopolymers.*
2. *To familiarise with Biopolymer Technology and Applications*

**Text Books:**

1. EmoChiellini ,EmoChiellini and Helena Gil, *Biorelated Polymers: Sustainable Polymer Science and Technology*, Springer 2001.
2. Johnson .R.M, L.Y. Mwaikambo and N. Tucker, *Biopolymers*, Rapra Technology, 2003.

**Course No: 07BT62097**

**Course Title: PROTEIN ENGINEERING**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites:** Knowledge of structure and function of amino acids , protein structure

### **Course Objectives:**

- *Learn structure and function of proteins of particular importance, the student will know the production of recombinant insulin & in general how to engineer protein to be used as therapeutics*

### **Course Content/ Syllabus:**

The protein makeup. Interaction and elucidation of protein structure with electromagnetic radiation. Peptide mapping, peptide sequencing, significance of Ramachandran's plot. High-throughput protein sequencing setup. Zn fingers, helix-turn helix motifs in homeodomain, Leucine zippers. Membrane proteins. Design and construction of novel proteins and enzymes, Conformation of proteins in general and enzymes in particular. Effect of amino acids on structure of proteins, Energy status of a protein molecule.

### **Course Outcome:**

1. *To have a deeper understanding of the physico chemical make up of proteins.*
2. *To understand the structure function relationship between proteins*

### **Text Books:**

1. Voet D. and Voet G., "Biochemistry", Third Edn. John Wiley and Sons, 2001
2. Creighton T.E. Proteins, Freeman WH, Second Edition, 1993

**References:**

2. Moody P.C.E. and Wilkinson A.J. "Protein Engineering", IRL Press, Oxford, UK, 1990.

**COURSE PLAN**

<b>COURSE NO: 07BT62097</b>		
<b>COURSE TITLE:PROTEIN ENGINEERING (L-T-P : 3-0-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Protein interactions: Covalent, Ionic, Hydrogen, Coordinate, hydrophobic and Vander vals interactions in protein organization. Interaction and elucidation of protein structure with electromagnetic radiation. Peptide mapping, peptide sequencing, significance of Ramachandran's plot.	5	15
<b>MODULE: 2</b> High-throughput protein sequencing setup Secondary structures: Alpha, beta and loop structures and methods to determine. Super-secondary structure: Alpha-turn-alpha, beta-turn-beta (hairpin), beta-sheets, alpha-beta-alpha, topology diagrams, up and down & TIM barrel structures nucleotide binding folds, prediction of substrate binding sites. Tertiary structure: Domains, folding, denaturation and renaturation, overview of methods to determine 3D structures, Quaternary structure: Modular nature, formation of complexes.	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Structure function relationship: DNA-binding proteins: prokaryotic transcription factors, Helix-turn-Helix motif in DNA binding, Trp repressor, Eukaryotic transcription factors, Zn fingers, helix-turn helix motifs in homeodomain, Leucine zippers.	5	15
<b>MODULE: 4</b> Membrane proteins: General characteristics, Transmembrane segments, prediction, bacteriorhodopsin and Photosynthetic reaction center, Immunoglobulins: IgG Light chain and heavy chain architecture, abzymes and Enzymes: Serine proteases, understanding catalytic design by engineering trypsin, chymotrypsin and elastase, substrate-assisted catalysis other commercial applications.	6	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Design and construction of novel proteins and enzymes, Physical methods such as x-ray crystallography for		

determination of protein structure, Site directed mutagenesis for specific protein function, Basic concepts for design of a new protein/enzyme molecule.	10	20
<b>MODULE : 6</b> Protein phosphorylation – immunoglobulins - Nucleotide binding proteins – enzyme serine proteases - ribonuclease – lysozyme ,methods to alter primary structure of proteins –Engineered proteins – de novo protein design. Therapeutics - cellular and molecular therapeutics, Interferons, insulin, monoclonal antibodies in therapy.	10	20
<b>END SEMESTER EXAMINATION</b>

## **07BT6208X**

**Course No: 07BT62082**

**Course Title: BIOPROCESS MODELS: DESIGN AND STABILITY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites:** Knowledge of MATLAB

**Course Objectives:**

- *Develop knowledge and appreciation of the conceptual and factual bases for bioprocess design and operation*

**Course Content/ Syllabus:**

Aspects of Modeling in bioprocess industries-Uses and limitations of mathematical Models.Importance of probability and Stochasticity in biological process. Characteristics of a dynamical system:Monad Model, Lotka-Volterra systems. Numerical methods for solving a linear system:Development of mathematical Models:Analysis of mathematical Models:Concepts of stability in multidimensional systems - Equilibrium points, limit cycles, eigenvalues of the Jacobian matrix

**Course Outcome:**

1. *Ability to solve optimization using MATLAB.*
2. *Application in process development*

**Text Books:**

1. Wayne Bequette.B, Process dynamics Modeling and analysis and simulation,. PrenticeHallInc, 2004.
2. John H. Seinfeld and Leon Lapidus., Mathematical Methods in Chemical Engg., (Vol. 3),Process Modeling, Estimations and Identification. Prentice Hall, 1974.

## COURSE PLAN

<b>COURSE NO: 07BT62082</b> <b>COURSE TITLE: BIOPROCESS MODELS: DESIGN AND STABILITY</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE : 1</b> Aspects of Modeling in bioprocess industries: Basic classifications, fundamental features of Models: Knowledge-based and data based Models, unstructured and structured Models, compartmental Models, metabolic network Models, fuzzy logic, hybrid Models	8	15
<b>MODULE : 2</b> Uses and limitations of mathematical Models : Illustrations of algebraic equations, ordinary differential equations, difference equations partial differential equations, integral equations and integro-differential equations. Importance of probability and Stochasticity in biological processes. Introduction to chaos	6	15
FIRST INTERNAL TEST		
<b>MODULE: 3</b> Characteristics of a dynamical system: State-space representations: state variables and parameters, input and output vectors, state evolution. Linear and non-linear systems. Popular examples like Monad Model, Lotka-Volterra systems	6	15
<b>MODULE: 4</b> Numerical methods for solving a linear system: General form of a linear system , Concepts of numerical techniques : Newton's method, Euler Integration, Runge-Kutta Integration, MATLAB integration routines. Linearization of non-linear Models and its interpretation: basic concepts	6	15
SECOND INTERNAL TEST		
<b>MODULE : 5</b> Development of mathematical Models: Material and energy balances - Design parameters and tuning parameters - developing equations for process rates from first principles. Concepts in optimization for parameter estimation: Objective function, convex problems, parameter search space - local and global optimums, stationary points, Hessian matrix, Necessary and sufficient conditions for optimality, constraints, Lagrange multipliers Design of experiments for parameter estimation - Accuracy of parameter estimates: sensitivity analysis. Concepts in parameter identifiability	10	20

<b>MODULE : 6</b> Analysis of mathematical Models:Concepts of stability in one dimensional systems - Equilibria, convergence, eigenvalues, attractors and basin of attraction, bistability, phase portraits, bifurcation Concepts of stability in multidimensional systems - Equilibrium points, limit cycles, eigenvalues of the Jacobian matrix.	6	20

**Course No: 07BT62084**

**Course Title: FOOD PROCESSING TECHNOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Understand the basics of manufacturing of food products of consistent quality and nutritional value at affordable cost*
- *Develop skilled and competent manpower for food processing industries*

**Course Content/ Syllabus:**

Food as Source of Nutrients - Effect of processing on food proteins, Food additives.food microbiology-preservation techniques-Food storage Food packaging-Units Operations in Food Processing Industry. Microbial spoilage and methods of control of fruits and vegetables. Factors causing food spoilage, Food Preservation Hydrothermal treatment of grains-concepts of Food Quality-Quality assurance

**Course Outcome:**

1. Explain the spoilage and deterioration mechanisms in foods and methods to control deterioration and spoilage
2. Describe the transport processes and unit operations in food processing as demonstrated both conceptually and in practical laboratory settings.
3. Explain the properties and uses of various packaging materials.
4. An updated knowledge about maintenance of food quality control aspects

**Text Books:**

1. Food Chemistry by L H Meyor (CBS Publisher, Delhi)
2. Modern Food Microbiology, James M. Jay, CBS Publishers & Distributors, Delhi.
3. Food Engineering Fundamentals, J.Claire Batty, Steven L Folkman, John Wiley & Sons.
4. Fundamentals of Food Process Engineering, Romeo Toledo, Van Nostrand Reinhold, New York

**References:**

1. Food Microbiology, W C Frazier and D C Westhoff, McGraw Hill Book Company, NY.
2. Post harvest technology of Cereals, Pulses and Oilseeds by Chakravarti A. Oxford Publishing.
3. Cereal Technology by Potter NN. AVI Publication.
4. Unit Operations of Agricultural Processing, K.M.Sahay & K.K.Singh, Vikas Publishing House.
5. Engineering of Dairy & Food Products, A.W.Farral.

**COURSE PLAN**

<b>COURSE NO: 07BT62084</b>		
<b>COURSE TITLE: FOOD PROCESSING TECHNOLOGY</b>		
<b>(L-T-P : 2-1-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE : 1</b> Food as a Source of Nutrients: sources and function of lipids, carbohydrates, proteins and minerals. Effect of processing on food proteins, Food additives.	6	15
<b>MODULE: 2</b> Significance of microorganisms in foods.		

Chemical & Microbial Kinetics in Food Products, Nutrient preservation. Food packaging materials. Introduction to Units Operations in Food Processing Industry, Radiation sensitivity of micro-organisms, Effect of ionizing radiation on nutrients	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Food storage requirements and methods. Microbial spoilage and methods of control of fruits and vegetables. Pasteurization of milk and defects in milk and milk products. Microbiology of Canned Foods	6	15
<b>MODULE: 4</b> Hydrothermal treatment of grains, Parboiling and milling of paddy, Dry and wet milling of corn, Modern methods of milling of pulses. Factors affecting milling of pulses	6	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Engineering Properties of Food Materials: Mechanical, Physical & Rheological properties. Food Spoilage & Control: Factors causing food spoilage, Food Preservation by use of Low Temperature, High temperature and Drying	8	20
<b>MODULE: 6</b> General concepts of Food Quality, Safety and Management Systems, General principles of food hygiene – Quality assurance: GPs, HACCP system for food quality, ISO . Case studies.	10	20
<b>END SEMESTER EXAMINATION</b>		

### ACADEMIC ASSESSMENT/EVALUATION

		<u>Maximum marks :100</u>

	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT62086**

**Course Title: METABOLIC ENGINEERING**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To understand and utilize cellular pathways for chemical transformation, energy transduction, and supramolecular assembly*
- *Purposeful alteration and manipulation of metabolic pathways for industrial applications.*

**Course Content/ Syllabus:**

Prokaryotic and Eukaryotic cell structures; pure culture techniques-Different media (simple, complex and defined) - Growth curve-Bioenergetics, Metabolism of Biomolecules-, Metabolic engineering in practice: Concept of directed cellular energy utilization –analytical and synthetic elements of metabolic engineering-Application of pathway manipulations

**Course Outcome:**

1. *Have acquired in depth knowledge on metabolic pathways and their regulation and on how metabolic pathways can be engineered for the improvement of various bioprocesses.*

**Text Books:**

1. G Stephanopoulos et al; *Metabolic Engineering principles & Methodologies*
2. T. Scheper R Faurie, J. Thommel *Advance in Biochemical engineering Biotechnology:Microbila production of L – Aminoacid*

**References:**

3. Microbiology, L.M. Prescott, J.P. Harley and D.A. Klein, 7/e, 2007. McGraw Hill, Boston.
4. Fundamental Principles of Bacteriology, A.J. Salle, 1999. Tata McGraw - Hill Publishing Company Limited, New Delhi.
5. Microbial Ecology. Fundamentals and Applications, R. M. Atlas and R. Bartha, 2000.
6. Microbiology, M.J. Pelzer Jr., E.C.S. Chan and N.R. Kreig, 1993. McGraw Hill Inc., New York.
7. Biochemistry, 4th edition, L.Stryer., 1999. W.H, Freeman & company, New York.
8. Principles of Biochemistry, AL. Lehninger, D.L. Nelson and M. M. Cox., 1993. Worth Publishers, New York.
9. Biochemistry 4th edition, G. Zubay, 1998. McMillan Publishing Co. New York

## COURSE PLAN

<b>COURSE NO: 07BT62086</b> <b>COURSE TITLE: METABOLIC ENGINEERING</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE: 1</b> Prokaryotic and Eukaryotic cell structures; pure culture techniques- isolation, cultivation, enumeration and preservation of microbes; staining techniques- simple and differential staining. Nutritional requirements and nutritional grouping of microorganisms; Different media (simple, complex and defined)	6	15
<b>MODULE: 2</b> Growth curve; Axenic culture, Synchronous culture, Continuous culture; Different; Effects of physical and chemical factors on microbial growth. Microbial genetics-recombination - transformation, transduction, conjugation, regulation of gene expression. Bioenergetics, Metabolism of Carbohydrates, Proteins, Amino acids, Lipids and Nucleic acids-their biosynthesis and degradation	8	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Integration of carbohydrate and fatty acid metabolism. Mechanism of oxidative phosphorylation and its inhibitors, and photophosphorylation, urea cycle, hormonal regulation of mammalian metabolism. Heterocyclic compounds and secondary metabolites - prostaglandins, leukotrienes, thromboxanes, interferons and interleukins, antibodies, alkaloids, plant and animal pigments	8	15
<b>MODULE: 4</b> Metabolic engineering in practice: Concept of directed cellular energy utilization –analytical and synthetic elements of metabolic engineering – targets of metabolic engineering. Strategies for redirecting branched and linear pathways: (Alteration of feed back regulation; limiting accumulation of end product feed back resistant mutants, alteration of permeability).	6	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE : 5</b> Metabolic Flux Analysis: Concept and utility of MFA – Theory – case studies – over determined systems – experimental determination of MFA by isotope labeling – applications of MFA: Case studies- concept & fundamentals of metabolic control analysis. Application of pathway manipulations: Strategies for overproduction of primary metabolites.	8	20
<b>MODULE: 6</b> Strategies for overproduction of secondary metabolites (precursor effects, propphaseidiophase relationship, enzyme induction, feed back regulation.) Bioconversions: (ME concepts applied in process decisions for enhanced	6	20

bioconversion).

Examples of pathway manipulations: Enhancement of product yield (alcohol, amino acids) – extension of substrate ranges (lignocelluloses utilization) – extension of product spectrum (antibiotic, biopolymers) - improvement of cellular properties (alteration of metabolism, enhanced efficiency and yield, genetic stability).

**Course Title: BIO PROCESS MODELLING AND SIMULATION**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *To give student an understanding of Process Modeling and Simulation*

#### **Course Content/ Syllabus:**

Elements of probability theory-Perspective on Modeling of physical, chemical and biological phenomena-mathematical Models in Bioprocess Model-Mathematical Models for mixing vessel- Review of numerical techniques for the solution of bioprocess Models.-Introduction to population balance Modeling in bioprocess engineering.

#### **Course Outcome:**

1. *Develop model equations for a given system*
2. *Demonstrate model solving ability for various processes/unit operations*

#### **Text Books:**

1. John H. Seinfeld and Leon Lapidus., *Mathematical Methods in Chemical Engg., (Vol. 3), Process Modeling, Estimations and Identification.* Prentice Hall, 1974.
2. Luyben W.L., *Process Modelling, Simulation and Control for Chemical Engineers,* McGraw Hill International Edition

#### **References:**

1. Ramakrishna. D, *Population Balances*. Academic Press, 2000

### COURSE PLAN

<b>COURSE NO: 07BT62088</b> <b>COURSE TITLE: BIO PROCESS MODELLING AND SIMULATION</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE : 1</b> Perspective on Modeling of physical, chemical and biological phenomena, uses and limitations of mathematical Models in Bioprocess Models- Basic classifications, fundamental features of Models.	6	15
<b>MODULE : 2</b> Examples involving algebraic equations, ordinary differential equations, difference equations partial differential equations, integral equations and integro-differential equations. Elements of probability theory, stochastic Models parameter estimation Model forms for parameter estimation.	8	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3</b> Parameter estimation using moments, design of experiments for parameter estimation. Accuracy of parameter estimates. Design of experiments for Model discrimination - Regression and interpolation	6	15
<b>MODULE : 4</b> Mathematical Models for mixing vessel- mixing with reaction - reversible reaction- steam jacketed vessel- isothermal constant and variable hold up CSTR in series- Boiling of single component liquid-open and closed vessel - continuous flow boiling. Multi-component boiling system - batch distillation-condensation.	8	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> Review of numerical techniques for the solution of bioprocess Models. Non linear systems analysis Phase – Plane analysis in classical bioreactor Models, Introduction to population balance Modeling in bioprocess	8	20

engineering – The solution of population balance equations.		
<b>MODULE: 6</b> Budding of yeast population – Modeling of cells with dynamic morphology – Modeling for biological populations with correlation between life spans of siblings. Modeling of Industrial sterilization processes	6	20
<b>END SEMESTER EXAMINATION</b>

# **ELECTIVE III**

## **07BT6210X**

**Course No: 07BT62102**

**Course Title: MOLECULAR DIAGNOSTICS**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Understanding the molecular basis of diseases and techniques involved in diagnosis of diseases.*

**Course Content/ Syllabus:**

Host pathogen interactions in disease process  
Molecular techniques for analysis of Biochemical, Immune, Genetic disorders.  
Monoclonal antibodies as diagnostic reagents  
Development of molecular diagnostic technology.-Molecular techniques for diagnosis-DNA sequencing and diagnosis ,biosensors and nanotechnology.. OIE guidelines in development of diagnostics. Present methods for diagnosis of Specific diseases. Current issues and opportunities in the diagnostic sector

**Course Outcome:**

1. *Describe the laboratory techniques used to detect: microorganisms, inherited disease, DNA polymorphisms, neoplastic processes, DNA based tissue typing.*
2. *Outline the quality assurance process required in a molecular diagnostic laboratory.*

**Text Books:**

1. Fundamentals of Molecular Diagnostic Paperback – 1 Jan 2007 by Carl A. Burtis , David Bruns, Edward R. Ashwood
2. Tietz Textbook of Clinical Chemistry and Molecular Diagnostics Hardcover – 1 Jan 2012 by Carl A. Burtis

**References:**

1. Elles R & Mountford R. 2004. *Molecular Diagnosis of Geneti Disease*. Humana Press.
2. Rao JR, Fleming CC & Moore JE. 2006. *Molecular Diagnostics* Horizon Bioscience.

## COURSE PLAN

<b>COURSE NO: 07BT62102</b> <b>COURSE TITLE: MOLECULAR DIAGNOSTICS</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE : 1</b> Host pathogen interactions in disease process. Clinical diagnosis of diseases. Introduction and historical perspective of development of molecular diagnostic technology. Cancer biomarkers.	6	15
<b>MODULE : 2</b> Concept of development of group specific and strain specific nucleic acid based diagnostics, basis for selection of gene/nucleotide sequence of pathogenic organism to target for detection. Molecular techniques for analysis of Biochemical, Immune, Genetic disorders.	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3</b> Application of restriction endonuclease analysis for identification of pathogens. Antibody based diagnosis; Monoclonal antibodies as diagnostic reagents. Diagnosis of infectious diseases by using ELISA and Western blot.	6	15
<b>MODULE : 4</b> DNA sequencing and diagnosis , Theoretical background of development of PCR and Real time PCR and its variations, application of PCR for diagnosis of infectious diseases of animals and poultry, nucleic acid sequence based diagnostics.	8	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE : 5</b> Array based techniques in diagnosis (DNA & Protein array); single nucleotide polymorphism and disease association; Two dimensional gene scanning. Diagnostic technology based by biosensors and nanotechnology.	8	20
<b>MODULE : 6</b> OIE guidelines in development of diagnostics. Present methods for diagnosis of Specific diseases like Tuberculosis, Malaria and AIDS; Ethics in Molecular Diagnosis. Current issues and opportunities in the diagnostic sector.	8	20
<b>END SEMESTER EXAMINATION</b>

**Course No: 07BT62104**

**Course Title: BIOREACTOR DESIGN**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Learn the basic and advanced principles of a designing a reactor for industrial applications*

**Course Content/ Syllabus:**

Introduction and Review of Bio-reaction engineering concepts-Modeling of non-ideal behavior in bio reactors-Continuous Stirred Tank Bioreactor-Fed-batch reactor-Recycle system-The Transient Behavior of Bioreactors-Design of a fermenter-Instrumentation and control-structured and unstructured Models for bioprocess systems.

**Course Outcome:**

1. *Estimate values for process variables using suitable correlations and equations developed from first principles.*
2. *Formulate sensitivity analysis on bioreactor systems and determine optimum operating parameters.*

**Text Books:**

1. Chemical Reaction Engineering - Octave Levenspiel
2. Elements of Chemical Reaction Engineering - H. Scott Fogle
3. Biochemical Engineering Fundamentals - James E. Bailey, David F. Ollis

**References:**

1. Bioprocess Engineering Principles - Pauline M.Doran

2. Bioprocess Engineering Basic Concepts - Michael L. Shuler, Fikret Karg

**COURSE PLAN**

<b>COURSE NO: 07BT62104</b> <b>COURSE TITLE: BIOREACTOR DESIGN</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Introduction and Review of Bio-reaction engineering concepts, Mass transfer effects in heterogeneous reaction, Continuous stirred tank and plug flow reactor performance equations. Modeling of non-ideal behavior in bio reactors- problem and solution. Tanks in series Model. Dispersion Models with chemical reaction. Applications to design of continuous sterilizers – problems and solution.	8	15
<b>MODULE : 2</b> Continuous Stirred Tank Bioreactor : performance equation for M-M kinetics, substrate inhibition kinetics and product inhibition kinetics, chemostat with cell cultures –steady state cell and substrate concentrations and productivity as a function of dilution rate, CSTR with immobilized enzymes, operation of CSTR in a constant feed rate policy	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3</b> Fed–batch reactor: Applications of fed reactor, Fed batch operation of mixed reactor, material balance on cell and substrate <b>Recycle system:</b> Chemostat with recycle, Biological waste water treatment, Feed forward control of the activated sludge process	6	15
<b>MODULE : 4</b> The Transient Behavior of Bioreactors: Stability analysis, Stability of the chemostat, Stability of chemostat with substrate inhibition, Operating diagram, Transient responses of the chemostat, control of the chemostat, Instrumentation and control of bioreactor: Methods of measuring process variables, measurement and control of dissolved oxygen, pH measurements	6	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE : 5</b> Design of a fermenter: Basic function of a fermenter for microbial or animal cell culture, basic bioreactor design criteria, overview of bioreactor types-stirred tank bioreactor, bubble column bioreactor, air-lift reactor, propeller loop reactor, jet loop reactor, schematic overview of a fermenter with control system, operating issues that affect reactor design, aeration and oxygen mass transfer in bioreactor system, design of chemostat	10	20
<b>MODULE: 6</b> Introduction to structured and unstructured		

Models for bioprocess systems. Structured compartment Model – Williams and Ramakrishna Model ,single cell Model, metabolic Model, Genetically structured Model, Model simulation using MATLAB, Simulink.	6	20
<b>END SEMESTER EXAMINATION</b>

**Course Title: GENOMICS & PROTEOMICS**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Understanding structural, functional and comparative genomics its application for health applications and drug discovery*

**Course Content/ Syllabus:**

Human Genome Project-cloning-vectors-DNA databanks-coding sequences-Protein sequence information-protein databanks-Tools and techniques in proteomics-3-dimensional structure determination-.Phylogenetic analysis.

**Course Outcome:**

1. *Use the different methodologies, techniques and tools commonly used in proteomics and genomics.*

**Text Books:**

1. Bioinformatics; Methods and applications; Genomics, Proteomics and Drug Discovery; (Rastogi, S. C. and Mendiratta and Rastogi, P)
2. Bioinformatics; A practical guide to the analysis of genes and proteins.; Edited by, Andreas D. Baxevanis and Francis Oulelette

**References: \_**

3. Sensen CW. 2005. *Handbook of Genome Research*. Vols. I, II. Wiley-CVH.

**COURSE PLAN**

<b>COURSE NO: 07BT62106</b> <b>COURSE TITLE: GENOMICS &amp; PROTEOMICS</b> <b>(L-T-P :2-1-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Goals of the Human Genome Project, cloning vectors, concept of maps, physical maps, shotgun libraries, DNA polymorphism, nucleotides, DNA sequences. Sequence databases: Gene Bank, EMBL Nucleotide sequence databank, DNA Data Bank of Japan (DDBJ), database formats	6	15
<b>MODULE:2</b> Recombinant DNA technology, restriction enzymes, resource for restriction enzyme (REBASE), similarity search. Polymerase chain reaction, primer selection for PCR, BLASTn, application of Bio Edit.Genome information and special features, coding sequences (CDS), un-translated regions (UTR's),	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> cDNA library, expressed sequence tags (EST). Approach to gene identification; masking repetitive DNA, database search, codon-bias detection, detecting functional sites in the DNA. Internet resources for gene identification, detection of functional sites, gene expression. Introduction, Basic steps for gene expression	6	15
<b>MODULE: 4</b> Concept of microarrays; spotted arrays, oligonucleotide arrays, designing the experiment, Two-color microarray experiments. Protein sequence information, composition and properties, physic chemical properties based on sequence, sequence comparison, Primary and Secondary databases. Pair-wise sequence alignment, gaps, gap-penalties,	8	15

scoring matrices, PAM250,BLOSUM62, local and global sequence alignment, multiple sequence alignment, useful programs, ClustalW, BLASTp		
<b>SECOND INTERNAL TEST</b>		
<b>MODULE : 5</b> Proteomics classification; Tools and techniques in proteomics; 2-D gelelectrophoresis, gel filtration, PAGE, isoelectric focusing, affinity chromatography, HPLC, ICAT, fixing and spot visualization, Mass spectroscopy for protein analysis, MALDI-TOF,	8	20
<b>MODULE: 6</b> Electrospray ionization (ESI), Tandem mass spectroscopy (MS/MS)analysis; tryptic digestion and peptide fingerprinting (PMF), Protein Micro array inproteineexpression, profiling and diagnostics, drug target discovery. Database searching, 3-dimensional structure determination by X-ray and NMR. Phylogenetic analysis	8	20
<b>END SEMESTER EXAMINATION</b>

**ELECTIVE IV**  
**07BT7201X**

**Course No: 07BT72011**

**Course Title: ADVANCED BIOSEPARATION TECHNIQUES**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Understand the principles and theory of Chromatography, mechanism of interaction and its applications in separation and analysis biomolecules such as proteins, peptides and small molecules of therapeutic importance.*

**Course Content/ Syllabus:**

Role of Downstream Processing in Biotechnology: Role and importance of downstream processing in biotechnological processes. Economics and downstream processing in Biotechnology. Physicochemical basis of bio-separation processes. Precipitation & Extraction methods: Precipitation with salts, organic solvents & polymers. Membrane-based separations (micro- & ultra-filtration) Principles of chromatographic separation Case studies: Preparation of commercial enzymes

**Course Outcome:**

1. *To understand the importance of downstream processing in Biotechnology*
2. *To familiarise with precipitation and extraction methods*

**References**

## COURSE PLAN

<b>COURSE NO: 07BT72011</b> <b>COURSE TITLE: ADVANCED BIOSEPARATION TECHNIQUES</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE: 1</b> Role of Downstream Processing in Biotechnology: Role and importance of downstream processing in biotechnological processes. Problems and requirements of bio-product-purification. Economics and downstream processing in Biotechnology. Cost cutting strategies, characteristics of biological mixtures, process design criteria for various classes of bio-products (high volume-low value products and low volume- high value products),	10	15
<b>MODULE: 2</b> Physicochemical basis of bio-separation processes. Primary Separation and Recovery Processes: Cell disruption methods for intracellular products, removal of insolubles, biomass (and particulate debris) separation techniques; flocculation and sedimentation, centrifugation and filtration methods	8	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE: 3</b> Precipitation & Extraction methods: Precipitation with salts, organic solvents & polymers. Batch extractions, staged extractions- cross current, co current, counter current extractions. Differential extractions, fractional extractions with a stationary phase, fractional extractions with two moving phases. Reverse micelle extraction, supercritical fluid extraction, in-situ product removal/integrated bioprocessing.	8	15
<b>MODULE : 4</b> Membrane-based separations (micro- & ultra-filtration): Theory; design & configuration of membrane separation equipment; applications; reverse osmosis, dialysis, electro dialysis, Iso-electric focusing.	6	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE : 5</b> <b>Adsorption:</b> Adsorption isotherms, industrial adsorbents, adsorption equipments for batch and continuous operations (co current and counter current), adsorption in fixed beds.	4	20

<p><b>MODULE : 6</b>  <b>Chromatography:</b> Principles of chromatographic separation – gel filtration, reversed phase, hydrophobic interaction, ion-exchange, expanded bed adsorption, bio affinity and IMAC, supercritical fluid chromatography.  <b>Case studies:</b> Preparation of commercial enzymes: Continuous isolation of enzyme prolyl-t RNA synthetase from mung bean, Intracellular foreign proteins from recombinant <i>E.coli</i> and extracellular enzyme (protease) recovery; Purification of biosurfactants from fermentation broths.</p>	8	20

**Course Title: INTELLECTUAL PROPERTY RIGHTS ( IPR) FOR A GLOBAL BIO-ECONOMY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *An understanding of IPR and Patent Systems in India. Development of a global standardization of patenting and the emerging of economies based on IPR.*

**Course Content/ Syllabus:**

Introduction to Patent and other IPRs, Types of IP, Patentability requirements-inventive-step, industrial applicability and disclosure requirements Biotechnological Invention by documentation and Search, Precautions while patenting disclosure/non-disclosure, Drafting of Patent in field of Biotechnology Bioprospecting&BiopiracyBiopiracy case studies , TRIPS- Does it favour Global transfer of Biotechnology Agriculture and food security: Intellectual property rights and the trade in seeds; Genetic Use Restriction Technologies

## Course Outcome:

1. To better understand about the IPR and patenting systems in the field of Biotechnology

## COURSE PLAN

<b>COURSE NO: 07BT72013</b> <b>COURSE TITLE: INTELLECTUAL PROPERTY RIGHTS (IPR) FOR A GLOBAL BIO-ECONOMY</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact Hours	Sem.Exam Marks;%
<b>MODULE : 1</b> Introduction to Patent and other IPRs, Types of IP: Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Geographical Indications. Patent protection, Patentability requirements-inventive-step, industrial applicability and disclosure requirements.	8	15
<b>MODULE : 2</b> Biotechnological Invention by documentation and Search, Drafting of Patent in field of Biotechnology, Patent filing in India and in abroad, Successful research and commercialization of biotechnological inventions	6	15
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3</b> Precautions while patenting disclosure/non-disclosure, Patent infringement- meaning, scope, litigation. Diamond VS Chakrabarty Case. Orphan Drugs and diseases, The 90/10 research gap, Effect of TRIPS on drug prices in the developing world.	6	15
<b>MODULE : 4</b> The International Debate on Traditional Knowledge as Prior Art in the Patent System', Bioprospecting&Biopiracy, Biopiracy case studies (Case studies of Neem /Turmeric/Arogyapacha of KaniTribals in Kerala/Rosy Periwinkle of Madagascar)-Traditional Knowledge Digital Library- Need and Development.. CBD as a treaty for protecting Traditional Knowledge.	8	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE: 5</b> TRIPS- Does it favour Global transfer of Biotechnology? CBD and the need of CBD for global developing countries. Regime shifting between TRIPS and Other agreements in Global lawmaking.' Industry Strategies for Intellectual Property and Trade: The Quest for TRIPS and Post-TRIPS Strategies'	8	20
<b>MODULE: 6</b> Agriculture and food security: Intellectual property rights and the trade in seeds; Genetic Use Restriction Technologies- Terminator and Traitor technology. UPOV Treaty- disadvantages for India, Indian PPVFR Act 2001.Criteria for Plant variety (Novelty, Distinct, Unique, Stable)	6	20

## END SEMESTER EXAMINATION

### ACADEMIC ASSESSMENT/EVALUATION

		<u>Maximum marks :100</u>
<b>Internal Assessment</b>	Internal Exam 1	15
	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT72015**

**Course Title: MOLECULAR MODELLING & DRUG DISCOVERY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

*To understand the various molecular Modeling structures. To understand the basic principles underlying drug design designing methods*

• **Course Content/ Syllabus:**

Modeling basics. Generation of 3D Coordinates Crystal data, Fragment libraries Solvent effects and Quantum Mechanical methods Conformational analysis Computational tools for Molecular Modeling, conformational analysis using - Systematic Search Procedures, Monte carlo and molecular dynamics methods Force field, quantum chemistry, Schrödinger equation, potential energy functions, energy minimization Analog based drug design, Drug discovery area, pharmaco genetics and pharmacogenomics applications, computer-aided drug designing methods.

**Course Outcome:**

*1. To familiarise with molecular modelling and simulation principles and softwares*

**References:**

1. Principles and applications of Modeling by Leach
2. Molecular Modeling by the Hans Peter Heltie & GerdFalkens, VCH.
3. Chemical application of molecular modeling,Jonathan Goodman.
4. Computational chemistry by Guy H Grant & W.Graham,Oxford University

## COURSE PLAN

<b>COURSE NO: 07BT72015</b> <b>COURSE TITLE: MOLECULAR MODELLING &amp; DRUG DISCOVERY</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
MODULES	Contact hours	Sem.Exam Marks;%
<b>MODULE : 1</b> Modeling basics. Generation of 3D Coordinates Crystal data, Fragment libraries, and conversion of 2D Structural data into 3D Form, Force fields, and Geometry optimization, Energy minimizing Procedures, use of Charges, Solvent effects and Quantum Mechanical methods. Conformational analysis.	6	15
<b>MODULE: 2</b> Computational tools for Molecular Modeling, conformational analysis using - Systematic Search Procedures, Monte carlo and molecular dynamics methods. Determining features of proteins (Interaction potential, Molecular Electrostatic Potential, molecular interaction fields, properties on molecular surface and Pharmacophore identification. 3DQSAR Methods.	8	15
FIRST INTERNAL TEST		
<b>MODULE : 3</b> Introduction, force field, quantum chemistry, Schrödinger equation, potential energy functions, energy minimization, local and global minima, saddle point, grid search, various approximations; LCAO, HF, semi-empirical calculations; single point calculations, full-geometry optimization methods, ZDO, MNDO, CNDO, NDDO, AM1,PM3, RM1, conformational search, Z-matrix, docking, molecular Modeling packages.	8	15
<b>MODULE : 4</b> Comparative protein modeling: Modeling by Homology the alignment, construction of frame Work, selecting variable regions, side chain placement and refinement, validation of protein Models – Ramchandran plot, threading and ab initio modeling.	6	15
SECOND INTERNAL TEST		
<b>MODULE: 5</b> Analog based drug design: Introduction to QSAR, lead Module linear and nonlinear Modeled equations, biological activities, physicochemical parameter and molecular descriptions, molecular Modeling in drug discovery.	4	20
<b>MODULE : 6</b> Introduction, drug discovery area, pharmaco genetics and pharmacogenomics applications, SNPs, parameters in drug discovery identification of drug target molecules, drug design and its approaches, computer-aided drug designing methods; computer aided molecular design (CAMD), Quantum CAChe and project leader, ligand design methods, docking programs; De novo design	6	20
END SEMESTER EXAMINATION		

## **ACADEMIC ASSESSMENT/EVALUATION**

<b>Internal Assessment</b>	Internal Exam 1	15
	Internal Exam 2	15
	Assignment/Mini Project/Tutorial	10
	<b>End Semester Examination</b>	60

**Course No: 07BT72017**

**Course Title: FUNDEMENTALS OF SYNTHETIC BIOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Design and construction of new biological functions and systems not found in nature.*

### **Course Content/ Syllabus:**

Introduction to Biotechnology and Synthetic Biology- History, Goals, Applications, and Methods Overview The Central Dogma of Biology.DNA Structure & Modification Processes Synthetic Biology: Design Paradigm (Parts, Devices, Systems) The importance of network structure in cellular networks .Review of continuous and stochastic Models of cellular networks Control systems in metabolism. Control systems in protein networks Metabolic engineering strategies. Protein networks, control and dynamical analysis

### **Course Outcome:**

1. *To acquire knowledge about the basic concepts in synthetic biology, network structures in cellular level and control systems in metabolism.*

### **References:**

1. Synthetic biology-Industrial and environmental applications by Markus Schmidt
2. System biology and synthetic biology by Pengcheng Fu & Sven Panke.
3. The emergence of life- from chemical origins to synthetic biology By Pier Luigi Luisi.

## COURSE PLAN

**Course Title : NANOBIO TECHNOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Provide basic knowledge in the interface between chemistry, physics and biology on the nano structural level with a focus on biotechnological usage*

**Course Content/ Syllabus:**

The Science of Nano - What is Nanobiotechnology, Cellular nanostructures Introduction to Nanostructures : Carbon Nanotubes (CNT), Fullerenes (C60, C300) Nano Peapods, Quantum Dots and Semiconductor Nanoparticles Metal-based Nanostructures (Iron Oxide Nanoparticles) Protein-based Nanostructures: Nanomotors: Bacterial (*E.coli*) and Mammalian (Myosin family). Nanobiosensors: Science of Self-assembly - From Natural to Artificial Structures Nanotechnology & Microfluidics Nanoparticles: Synthesis and Applications. Applications of Nanostructures in Drug: Discovery, Delivery, and Controlled Release Nanotechnology for Tissue Engineering: Applications in Regenerative Therapy

**Course Outcome:**

1. *To understand the basic concepts in nanotechnology*

2. *To understand the significance of nanotechnology and its applications in the field of biotechnology*

**References:**

1. GeroDecher, Joseph B. Schlenoff, *Multilayer Thin Films*, Wiley-VCH Verlag GmbH & Co. KGaA, 2003

**Course Title: MANAGEMENT ENTREPRENEURSHIP & BIO-BUSINESS**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Impart technical knowledge and develop managerial skills for managing Bio - Technology business*
- *To promote entrepreneurship amongst students to venture in Bio - Technology business*

**Course Content/ Syllabus:**

**Management:** Introduction: Meaning nature and characteristics of Management, scope and functional areas of management **Managing Engineering Design and Development:** Product and Technology Life Cycles, Nature of Research and development, Research Strategy and organization **Managing Production Operations** **Entrepreneur:** Meaning of an Entrepreneur, Role of entrepreneurs in Economic Development, Entrepreneurship in India, Entrepreneurship Barriers **Preparation of Project:** Meaning of Project, Project

Identification, Project Selection, Project Report –Contents, Formulation and Project Appraisal **Technologies and Bio-Safety:** Principles of business management and concept of Bio-business **Commercialization:** Analysis of factor influencing international competitiveness in biotechnology **Project Cost and Market Potential:** Total product cost, capital investment and profitability

**Course Outcome:**

1. *To inculcate financial management and business skills.*

**References:**

1. R.A. Baron, S.A. Shane; Entrepreneurship, Thomson, 2004, ISBN 0-324-27356
2. Small Business Management: Entrepreneurship and Beyond, Timothy S Hatten

<b>COURSE NO: 07BT72035</b> <b>COURSE TITLE: MANAGEMENT ENTREPRENEURSHIP &amp; BIO-BUSINESS</b> <b>(L-T-P : 3-0-0) CREDITS:3</b>		
<b>MODULES</b>	<b>Contact Hours</b>	<b>Sem.Exam Marks;%</b>
<b>MODULE : 1 Management:</b> Introduction: Meaning nature and characteristics of Management, scope and functional areas of management, Management and administration, roles of management, levels of management. Development of Management Thought: Early management approaches and Modern management approaches. Functions of Management: Planning and Forecasting, Organizing, Directing and Controlling.	8	15
<b>MODULE : 2 Managing Engineering Design and Development:</b> Product and Technology Life Cycles, Nature of Research and development, Research Strategy and organization, selecting R & D Projects, Protection of Ideas. Creativity, Nature of Engineering Design, Systems Engineering / New Product Development, Control System in Design, Product Liability and Safety, Designing for Reliability, other “abilities” in Design. <b>Managing Production Operations:</b> Assuring product quality, Productivity, Work measurement, Maintenance and Facilities (Plant)	6	15

engineering and other manufacturing functions.		
<b>FIRST INTERNAL TEST</b>		
<b>MODULE : 3 Entrepreneur:</b> Meaning of an Entrepreneur, Role of entrepreneurs in Economic Development, Entrepreneurship in India, Entrepreneurship Barriers. Role of Micro Small & Medium Enterprises (MSME) in Economic Development, Impact of Liberalization, Privatization and Globalization on MSME, Effect of WTO/GATT. Different Schemes; TECSOK, KIADB, KSSIDC, KSIMC, DIC-Single Window Agency, MSME, NSIC, SIDBI, KSFC.	6	15
<b>MODULE : 4 Preparation of Project:</b> Meaning of Project, Project Identification, Project Selection, Project Report –Contents, Formulation and Project Appraisal. Identification of Business Opportunities: Market Feasibility studies, Technical Feasibility Studies; Financial Feasibility Studies and Social Feasibility studies.	8	15
<b>SECOND INTERNAL TEST</b>		
<b>MODULE : 5 Technologies and Bio-Safety:</b> Principles of business management and concept of Bio-business, Fundamentals and constituents of Biotech for bio-business, SWOT analysis of Indian Bio-business. <b>Commercialization:</b> Analysis of factor influencing international competitiveness in biotechnology, type of firms commercializing biotechnology, financing, tax incentives, issues and policies. Bioscience enterprises- raw bio-commodities, hybridization, tissue culture, bio-fermentation, bio-fertilizers.	6	20
<b>MODULE : 6 Project Cost and Market Potential:</b> Total product cost, capital investment and profitability, manufacturing cost estimation, capital investment estimation, Risk capital and working capital, manufacturing cost estimation for an intracellular protein, using cost analysis for R & D decision making.	6	20
<b>END SEMESTER EXAMINATION</b>

**Course Title: STRUCTURAL BIOLOGY**

**Credits: 3-0-0:3**

**Year: 2015**

**Pre-requisites: Nil**

**Course Objectives:**

- *Study protein and nucleic acid structure and function, focusing on energetic forces that guide folding, and computer Modeling to predict structures*

**Syllabus:**

Nucleic acid structures, RNA folding, RNA loops, conformational study, various ribose ring conformations Over expression of recombinant protein, Construction of an over expression system *In vivo* expression system:*Escherichia coli*, yeast (*S. cerevisiae*, *P. pastries* etc.), insect cells. *In vitro* expression system-cell-free system. Protein purification Crystallization: Crystallization techniques Protein Structure Prediction; Homology Modeling, prediction of protein structure from sequences Predicting trans-membrane helices

**Course Outcome:**

1. *To understand the biomolecules in structural and functional level*
2. *To understand the basic principles of modelling.*

**References:**

1. Introduction to Protein Architecture, by A.M.Leak
2. Introduction to Protein Structure, by Banden and Tooze.
