

B. Tech Curriculum and Syllabus (2024) - Semester I & II Biomedical Engineering

Branch Code: BME

(SHR/AC/Auto/ Acad. Council /B.Tech/3/Syll./BME)

Recommended by BoS on 29/08/2024

Approved by Academic Council on 31/08/2024

Preface to the Curriculum

The B.Tech. Biomedical Engineering (BME) curriculum is meticulously drafted to cultivate industry-ready professionals endowed with creativity and innovative thinking. This comprehensive curriculum includes induction programs, core and elective courses, practical courses, projects, internships, skill enhancement courses, and extracurricular activities. Designed to total 170 credits, the curriculum ensures a holistic education that prepares students for the dynamic field of Biomedical Engineering. Below is a detailed overview of the curriculum's salient features:

- 1. **Project-Based Learning Courses:** From the first semester to the fifth semester, one course integrated with Project-Based Learning **(PBL)** empowers students with creativity, engaging them in meaningful projects to learn, explore, and investigate. PBL promotes teamwork and collaboration, essential skills for any professional, by having students work together in teams, each contributing unique skills and perspectives to achieve a common goal.
- **2. Skill Enhancement Courses**: These courses are designed to provide students with industry-relevant certifications from reputed organizations, enhancing their employability by certifying their skill sets. They are integral to the academic curriculum and offered from Semester 1 to Semester 5, each carrying one credit.
- **3. Foreign Language Courses**: To prepare students for global careers, the curriculum includes options to learn foreign languages, promoting cross-cultural communication skills and international collaboration. These courses are available in the seventh semester.
- **4. Program Electives and Micro Specializations**: Students can pursue microspecializations by completing thematic courses, which allow them to gain in-depth knowledge in specific sub-areas of their discipline. Starting in the fourth semester, this provides an opportunity for focused learning and expertise in emerging fields in alignment with program elective courses.
- **5. Industry Elective Courses**: Offered jointly with industry partners, these courses ensure relevance and practical applicability. The academic department and industry partners develop and assess them collaboratively, without end-semester examinations, providing continuous and practical learning experiences.
- **6. Startups and Entrepreneurial Skills**: The curriculum encourages students to pursue startups, offering options to engage in product-based or service-based startups during their seventh and eighth semesters. This fosters innovation, creativity, and entrepreneurial skills, preparing students for the dynamic business environment.
- **7. Courses Embedded with Practicals**: The curriculum includes theory courses embedded with practicals and projects, ensuring students apply theoretical knowledge to real-world problems. This hands-on approach enhances learning outcomes and practical skills.

- **8. Internships**: The program includes mandatory internships, allowing students to gain industry exposure and practical experience. Students can undertake at least four to six months of internship in a recognized industry, research organization, or prestigious institution relevant to their field. This bridges the gap between academic learning and industry requirements, enhancing employability.
- 9. Community Work, Social Responsibility, and Universal Human Value Courses: The curriculum integrates opportunities for community work and socially relevant projects, promoting civic responsibility and leadership skills. Universal Human Value courses also aim to cultivate a holistic understanding of life, enhancing physical and mental well-being and social and life skills. These courses address various dimensions of life, including individual, family, society, and the environment, promoting a healthy and harmonious lifestyle.
- **10.Activity Points**: In addition to academic credits, students must earn activity points through participation in extracurricular activities such as sports, cultural events, community service, and entrepreneurship. This holistic approach ensures the development of leadership, teamwork, and communication skills, preparing students for global challenges.
- **11.MOOC Courses:** Students selected for internships can fulfil their credit requirements in the seventh and eighth semesters through MOOC courses, providing flexibility and additional learning opportunities.
- **12.Higher Credit Elective:** These courses carry more than the standard credit weight of elective courses. They allow students pursuing honors to reduce the number of required courses by earning additional credits through higher-credit electives. Additional credits earned from higher credit electives can be credited towards the total credit requirement of the honors program, with a maximum of 12 additional credits being applied towards the honors credit requirement.

This curriculum is designed to seamlessly blend theoretical knowledge with practical experience, foster interdisciplinary learning, and enhance employability through hands-on projects and internships, preparing students for successful careers in Biomedical engineering.

General Course Structure

1. Credit and Courses:

Credits are a unit of measurement for coursework based on the number of hours of instruction required per week. One hour of classroom lecture (L), 60 minutes long per week and carried out during all weeks of the semester, is considered one instructional unit or one credit. The same goes for a tutorial (T) or a project (R) that is 60 minutes long per week and carried out during all weeks of the semester. In addition, a minimum of 120 minutes per week of laboratory session, practical or fieldwork, training (P) or a

combination of these, carried out during all weeks of the semester, is also considered one Instructional Unit or one Credit.

| Classification | Credit assigned |
|----------------------------------|-----------------|
| 1 Hour Lecture [L] per week | 1 Credit |
| 1 Hour Tutorial [T] per week | 1 Credit |
| 1 Hour Project [R] per week | 1 Credit |
| 1-2 Hours Practical [P] per week | 1 Credit |
| 3-4 Hours Practical [P] per week | 2 Credit |

• For internship/Start-Up/Main project, the credit weightage for equivalent hours is 50% of that for lectures/tutorials

2. Course Category and Credits

The B.Tech. Program curriculum has 168 academic credits and 2 additional pass/fail credits that can be gained through 100 activity points. The program is expected to accommodate courses from other disciplines so that students have multi-disciplinary exposure. Additionally, the program should provide sufficient opportunities for students to enhance their communication, soft, managerial, and technical skills. Depending on the program, the courses should fall under the engineering, basic science, humanities science, and management categories. The structure of the UG program should essentially have the following categories of courses with the breakup of credits as given:

| Sl. No | Category | Code | Credits | |
|--------|---|---------|------------|--|
| 1 | Humanities and Social Sciences including Management | НМС | 9 | |
| 1 | Courses | TIMC | J | |
| 2 | Basic Science Courses | BSC | 20 | |
| 3 | Engineering Science Courses | ESC | 26 | |
| 4 | Programme (Professional) Core Courses | PCC | 52 | |
| 5 | Programme (Professional) Core Courses-Project Based | PBL | 16 | |
| 5 | Learning | PDL | 10 | |
| 6 | Program Elective Courses | PEC | 18 | |
| 7 | Open Elective Courses/Industry Linked Elective | OEC/ILE | 9 | |
| 8 | Project Work and Seminar | PS | 12 | |
| 9 | UHV and Community Work | PW | 1 | |
| 10 | Skill Enhancement Courses | SEC | 5 | |
| 11 | Mandatory Student Activities. | MSA | 2 | |
| | Total Mandatory Credits | 17 | ' 0 | |

A 10% to 15 % deviation in credits is permitted under each discipline. While developing the curriculum, the department offering the program should ensure that the students attain the above distribution upon completing their program. Either Minor or Honors can be opted from the optional specialization.

The courses are organized into 1/2/3/4 credit courses based on the content delivery mechanism and desired depth. The delivery methods include Theory-only, Theory with tutorial, Theory with practice, Theory with project, etc. The L-T-P-R-C for each course indicates the number of credits delivered as Lecture (L), Tutorial (T), Practical (P), Project (R) and the total instructional delivery indicated as Credits (C).

$$C = L + T + [P/2] + R$$

Apart from lectures, tutorials, practical/practice and project hours, the curriculum offers Self-learning hours (S) that indicate the number of hours students are expected to spend for activities that should be completed outside the class defined by the faculty handling courses. The activities aim to support learning and should be initiated by the students themselves without guidance or direction from tutors. For each course, the self-learning hour per week is calculated as:

$$S = (L*1+P*1+[R/2])$$

Categories of courses included in the curriculum and their L-T-P-R-C components are given in the table below:

| Sl. No. | Lecture- Tutorial- Practical- Project [L-T-P-R] | Credit [C] | Description |
|------------|--|---------------|---|
| 1. | 1-0-2-0 | ED2ICATIO | Theory course without End Semester |
| 2. | 1-0-0-0 | 1 | Examination [ESE] |
| 3. | 2-0-2-1 | 4 | Theory course embedded with practical and project |
| 4. | 3-1-0-0 | 4 | Theory course embedded with tutorial |
| 5. | 3-0-0-0 | 3 | Theory |
| 6. | 2-0-0-0 | 2 | Theory course |
| 7. | 3-0-2-0 | 4 | Theory course embedded with practical |
| 8. | 3-0-0-1 | 4 | Theory course embedded with project |
| 9. | 0-0-2-0 | 1 | Practical course without ESE |
| 10. | 0-0-3-0 | 2 | Practical course |
| 11. | 0-0-0-3 | 2 | Mini Project |
| 12. | 0-0-3-0 | 2 | Seminar |
| 13. | 0-0-0-8 | 4 | Major Project/Internship/Start-Up |
| 14. | 0-0-0-0 | 1 | MOOC Course |
| | | Manc | atory Courses |
| 15. | 0-0-2-0 | 1 | Skill Enhancement Courses |
| | | Minor/ | Honors Course |

| 16. | 4-0-0-0 | 4 | Theory course |
|-----|---------|---|---------------------|
| 17. | 0-0-0-4 | 4 | Project only course |

3. Course Code

Every course of B. Tech. The program shall take a code from the table given below.

| Course | Description |
|----------|---|
| category | |
| PCC | Program (Professional) Core Courses |
| PBL | Project Based Learning |
| CLT | Combined Lab Theory |
| PEC | Professional Elective Course |
| OEC | Open Elective Course |
| BSC | Basic Science Course |
| ESC | Engineering Science Course |
| HMC | Humanities, Social Sciences and Management course |
| MOOC | MOOC Course |
| IEL | Industry Elective Course |
| PW | Socially Relevant course |
| PS | Project Work and Seminar |
| SEC | Skill Enhancement Courses |
| HR | Honours |
| MR | Minor |

Structure of Course Code: Each course will be identified by a unique Course Code consisting of eight alphanumeric characters, formatted as **24XXYABC**. The code can be interpreted as follows: "24" represents the regulation year, "XX" is the course category code, "Y" indicates the course delivery mode, "A" is the semester number (ranging from 1 to 8, with 0 indicating the course is offered in both odd and even semesters), "B" denotes the version of the course under each category, and "C" signifies the course sequence number.

For example, 24CET303 is a theory course offered by the civil engineering department in the third semester of the 2024 scheme.

24BML408 - laboratory course offered by the biomedical engineering department in the fourth semester of the 2024 scheme

The detailed expansion of the abbreviation of the course code structure is listed in the table below:

| XX | Y | A | В | C |
|-----------------|----------------------|-----------------|-----------------------|----------------------------|
| Course category | Course delivery mode | Semest er No | Version of the course | Serial No: of Course |

4. Allotted and Cumulative Credits ION IS DEDICATION

The allotted and cumulative credits are given in the table below:

| Semester | Allotted Credits | Cumulative Credits |
|----------|------------------|---------------------------|
| First | 21 | - |
| Second | 22 | 43 |
| Third | 26 | 69 |
| Fourth | 24 | 93 |
| Fifth | 24 | 117 |
| Sixth | 23 | 140 |
| Seventh | 17 | 157 |
| Eighth | 11 | 168 |

| | FIRST SEMESTER (July-December) | | | | | | | | | | | | | | |

MODULE I: Linear Algebra(9 hours)

(Text 2: Relevant topics from section 7.3, 7.4, 7.5, 8.1, 8.4)

Linear systems of equations, Solution by Gauss elimination, Row echelon form and rank of a matrix, Fundamental theorem for linear systems - homogeneous and non-homogeneous (without proof), Eigen values and Eigen vectors, Diagonalization of matrices.

MODULE II: Ordinary Differential Equations (9 hours)

(Text 2: Relevant topics from section 2.1, 2.2, 2.6, 2.7)

Homogeneous linear ODEs of second order, Superposition principle, General solution, Homogeneous linear ODEs of second order with constant coefficients (Method to find general solution, solution of linear Initial Value Problem). Non homogeneous ODEs (with constant coefficients)- General solution, Particular solution by the method of undetermined coefficients (Particular solutions for the functions ke^{ax}, kxⁿ). Initial value Problem for Non Homogeneous Second order linear ODE (with constant coefficients).

MODULE III:Multi variable Calculus -Partial derivatives (9 hours)

(Text 1: Relevant topics from section 13.2, 13.3, 13.4, 13.5,13.8)

Limits and continuity, Partial derivatives, Partial derivatives viewed as rate of change and slopes, Second order and higher order partial derivatives, Local Linear approximations, Chain rule, total derivative, Implicit differentiation, relative maxima and minima.

MODULE IV: Laplace Transform(9 hours)

(Text 2: Relevant topics from section 6.1, 6.2, 6.3, 6.5)

Laplace Transform, Inverse Laplace Transform, Linearity property, First shifting theorem, Transform of derivatives, Solution of Initial value problems by Laplace transform (Second order linear ODE with constant coefficients with initial conditions at t=0), Unit step function and its transform (without solution of ordinary differential equation involving unit step function), Second shifting theorem, Convolution theorem (without proof) and its application to finding inverse Laplace transform of products of functions.

| | CO Assessment Questions | | | | | | |
| | 1. Find the rank, eigen values and eigen vectors of the given matrix $\begin{bmatrix} -1 & 2 & 22 \\ 6 & 8 & 26 \\ -8 & 20 & 16 \end{bmatrix}$ | Κ. | | | | | |

| CO-1 | 2. Diagonalize the matrix \[\begin{pmatrix} 1 & 2 & 3 \\ 6 & 8 & 6 \\ 8 & 2 & 1 \end{pmatrix} \] |
|------|---|
| | 3. Solve the following linear system of equations using Gauss elimination Method: x + y - z = 9, 8y + 6z = -6, -2x + 4y - 6z = 40. Team work: Use a CAS to write a program for Gauss elimination and back substitution |
| | (a) that does not include pivoting and (b) that does include pivoting. |
| CO-2 | Find a general solution of y^{II}-25y=0.Check your answer by substitution. Solve the IVP, y^{II}+16y=17e^x,y(0) =6, y^I(0)=-2. Find a general solution of 4y^{II}+32y^I+63y=0. Show the details of your calculation. |
| CO-3 | Find f_x(x,y) and f_y(x,y) for f(x,y)=2x³y²+2y+4x and use those partial derivatives to Compute f_x(1,3) and f_y(1,3). Locate all relative extrema and saddle points of f (x, y) = 3x² - 2xy + y² - 8y. Team work: Use a graphing tool or software to visualize the function g(x,y)=x³-3xy²+y³. Identify and classify the extrema. |
| CO-4 | Solve the IVP by the Laplace transform y¹+2y=0, y (0) =1.5 Find L(f), if f(t) = t cos4t. Sketch the graph of f(t) if F(s) = 1/S³ |

Preamble:

Provide students with comprehensive exploration of electrochemistry, corrosion mechanisms, engineering materials, molecular spectroscopy, analytical techniques, and environmental chemistry. Students will gain insights into the fundamental concepts, advanced methodologies, and practical applications essential for addressing contemporary challenges in materials science and environmental sustainability. This course equips learners with the knowledge and skills necessary to analyse, innovate, and implement solutions in bioengineering, ensuring a robust foundation for tackling complex real-world problems.

Prerequisite: Basic knowledge in Chemistry and Physics

Course Outcomes: After the completion of the course the student will be able to

- **CO 1** Employ the fundamental principles of electrochemistry and corrosion, to explore their potential applications across bioengineering sectors. (Apply)
- Apply knowledge of different engineering materials to select and integrate appropriate materials in various electronic sectors through practical experimentation in the laboratory. (Apply)
- CO 3 Interpret various analytical techniques effectively in biomedical and biotechnology domains. (Apply)
- CO 4 Understand and apply the principles of environmental chemistry and waste management. (Apply)

SYLLABUS

MODULE I: Electrochemistry and Corrosion Science (9 Hours)

Electrochemical Cell- Electrode potential- Nernst equation for single electrode and cell (numerical problems), Reference electrodes – SHE & Calomel electrode – construction and working, Electrochemical series – applications, glass electrode & pH measurement, conductivity- measurement. Li-ion battery: construction and working. **Corrosion** –Electrochemical corrosion mechanism (acidic & alkaline medium), Galvanic series, Corrosion control methods - cathodic protection, sacrificial anodic protection and impressed current cathodic protection, electroplating of copper, electroless plating of copper.

MODULE II: Engineering Materials (9 Hours)

Fuels: Calorific value – HCV and LCV, experimental determination of calorific value of solid fuels. Octane & Cetane number. Biofuels- biodiesel, green hydrogen

Lubricants: Classification - solid, semisolid and liquid lubricants. Properties of lubricants - viscosity index, flash point, fire point, cloud point, pour point & aniline point.

Nanomaterials - Classification based on dimension & materials - Synthesis - Sol gel & chemical reduction -bio-applications of nanomaterials - carbon nanotubes, fullerenes, graphene - structure, properties & application.

Polymers – Biodegradable polymers- PHBV, PLA -Synthesis, properties and applications, Conducting polymers-classification, Polyaniline & Polypyrrole-synthesis, properties and applications.

MODULE III: Molecular Spectroscopy and Analytical Techniques (9 Hours)

Molecular Spectroscopy: Types of spectra- molecular energy levels, beer lambert's law, numerical problems. Electronic spectroscopy – principle, types of electronic transitions –Role of Conjugation in absorption maxima,

instrumentation, applications, Vibrational spectroscopy – principle, number of vibrational modes, vibrational modes of CO_2 and H_2O , applications.

Chromatography- Chromatography- classification, principle, applications **Electron Microscopic Techniques:** SEM - Principle, instrumentation and applications.

MODULE IV: Environmental Chemistry (9 Hours)

Water characteristics – Hardness, types of hardness, temporary and permanent, Disadvantages of hard water, Degree of hardness (Numerical). Water softening methods-ion exchange process-principle, procedure and advantages. Water disinfection methods – chlorination, breakpoint chlorination, ozone and UV irradiation. Dissolved oxygen (DO), BOD and COD- definition, significance.

Waste Management: Air Pollution- Sources & effects, greenhouse gases, ozone depletion, control methods. Sewage water treatment- primary, secondary and tertiary, flow diagram -trickling filter and the UASB process.

Preamble:

The objective of this course is to expose the students to the fundamental concepts of mechanics and enhance their problem-solving skills. It introduces students to the influence of applied force systems and types of fluid flows and behaviour of fluids. After this course students will be able to recognize similar problems in real-world situations and respond accordingly.

Prerequisite: Nil

Course Outcomes: After the completion of the course the student will be able to

- **CO 1** Use the applicable principles or theorems to solve problems of mechanics [Apply]
- CO 2 Identify and describe the components of the system of forces acting on a rigid body and fundamental terms of elastic deformable bodies. [Understand]
- \mathbf{CO} 3 Determine the solution of dynamic problems using appropriate theorems. [Apply]
- **CO 4** Understand fluid kinematics and different types of fluid flow [Understand]

Module I: Resultant of Force Systems, Equilibrium of Rigid Bodies

Introduction to statics: introduction to branches of mechanics, concept of rigid body scalars and vectors, vector operations, forces in space.

SYLLABUS

Force systems: rectangular components in 2D and 3D, moment and couple, resultants Equilibrium: system isolation and the free-body diagram, equilibrium conditions 2D

Module II: Friction, Analysis of Deformable Bodies

Friction: -laws of friction – analysis of blocks and ladder

Introduction to analysis of deformable bodies – internal forces, Stress – stresses due to normal, shear and bearing load, Definition of linear and shear strains.

Material behaviour – uniaxial tension test – stress-strain diagrams – Hooke's law for linearly elastic isotropic material, Poisson's ratio, Relationship between Young's modulus, Poisson's ratio and rigidity modulus(no derivations)

Module III: Fluid Mechanics Principles

Hydrodynamics- Methods of describing fluid motion, Lagrangian and Eulerian methods, velocity and acceleration, types of fluid flow, description of fluid flow- streamline, pathline and streakline

Continuity equation, Euler's equation, Bernoulli's equation. Reynolds experiment, Reynold's number. Hagen- Poiseuille equation

Module IV: Dynamics of Rigid Bodies

Dynamics – rectilinear translation - equations of motion in kinematics and kinetics - D'Alembert's principle. – motion on horizontal and inclined surfaces

Rotation – kinematics of rotation- equation of motion for a rigid body rotating about a fixed axis

MODULE I: Analysis of DC circuits and Fundamentals of Magnetism (13 hours)

Elementary concepts of DC electric circuits: Ideal and non-ideal voltage and current sources; Ohm's law and Kirchhoff's laws; Resistances in series and parallel; Current and voltage division rules; Capacitors & Inductors: V-I relations and energy stored. Stardelta conversion (resistive networks only-derivation not required)-numerical problems.

Analysis of DC Electric circuits: Mesh current method - matrix representation - Solution of network equations. Node voltage methods-matrix representation-solution of network equations; Theorem and Thevenin's Equivalent Circuit; Norton's Theorem and Norton's equivalent circuit – numerical problems and verification through simulation software.

Elementary Concepts of Magnetic circuits: Magnetic Circuits: Basic Terminology: MMF, field strength, flux density, reluctance - Comparison between electric and magnetic circuits.

Electromagnetic Induction: Faraday's laws, Lenz's law- statically induced and dynamically induced emf – Self-inductance and mutual inductance, coefficient of coupling - numerical problems.

MODULE II: Analysis of AC circuits (9 hours)

Alternating Current fundamentals: Generation of alternating voltages - Representation of sinusoidal, square and saw tooth waveforms: frequency, period, average value, RMS value, peak factor and form factor – numerical problems

AC Circuits: Analysis of simple AC circuits: Purely resistive, inductive & capacitive circuits; Inductive and capacitive reactance, concept of impedance; RL, RC and RLC series circuits- power factor, active, reactive and apparent power - numerical problems and verification through simulation software.

Three phase AC systems: Generation of three phase voltages, advantages of three phase systems, star and delta connections (balanced only), relation between line and phase voltages, line and phase currents, 3-phase power (numerical problems excluded)

MODULE III: Introduction to Electronic devices (12 hours)

Passive and active components in electronics

Working of PN junction diode, V-I characteristics of PN Junction Diode Basics of Zener diode, Zener and avalanche breakdown. Basics of Zener voltage regulator Block diagram of DC power supply Circuit and working of half wave and bridge rectifiers (with and without capacitor filters) Construction, working and V-I Characteristics of BJT, Input output characteristics of CE configuration Comparison of CE, CB and CC configurations Transistor as a switch, Transistor as an amplifier (Circuit Diagram and working) Simscape Onramp, Circuit Simulation Onramp

MODULE IV: Modern Electronics and its applications (10 hours)

General block diagram of a Communication system, Block diagram of Fiber optic Communication system, Block diagram of Satellite Communication, Concept of AM and FM (No derivation required), Block diagram FM superheterodyne receiver, Basic concepts of Wired and Wireless communication, Block diagram of GSM, Comparison of 3G, 4G and 5G communication technologies, IoT based smart homes, IoT based healthcare and agriculture

| 4.7 | IoT based healthcare and agriculture | 1 | | | | | | | |
| | CO Assessment Questions | | | | | | | | |
| | 1. Solve for the mesh currents in the given circuit.? | | | | | | | | |
| CO1 | $ \begin{array}{c c} 2\Omega & 6\Omega & 2\Omega \\ \hline & & & & & \\ \hline & & & & \\ \hline & & &$ | | | | | | | | |

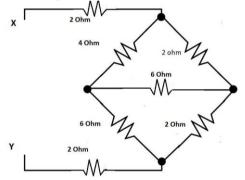

2. Applying Thevenin's theorem, determine the current flowing through the load resistor.

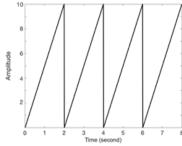

3. Find the node voltages v1 and v2 in the circuit given in Fig theoretically. Also find the power dissipated in the 4Ω resistor. Verify the same using any simulation tool.

4. Determine the equivalent resistance between terminal X-Y in the network.

5. Find the average and rms values of the given triangular signal.

- 6. A sinusoidal voltage of V= 325 sin314t when applied across an L-R series circuit causes a current of I = 14.14 sin (314t 60°) flowing through the circuit. Calculate (i) Impedance of the circuit (ii) value of L and R (iii) the power consumed
- 7. A resistor of 10 Ω , an inductor of 0.3 H and a capacitor of 100 μ F are connected in series across a 230 V, 50 Hz, single phase ac supply. Determine (a) impedance (b) current (c) power in watts (d) circuit power factor (e) voltage across inductor (f) apparent power. Verify the same through any simulation software.
- 8. Explain Kirchhoff's laws with suitable examples.

| | 9. Derive the expression for energy stored in an inductor and a capacitor 10. An alternating current is represented by i(t)=14.14 sin (377t). Find (i value (ii) frequency (iii)time period and (iv)instantaneous value of current at t=3ms. | • |
|-----|---|-------------------------|
| C02 | Distinguish between statically induced EMF and dynamically induced EM State and explain Faraday's laws of electromagnetic induction. A coil of 200 turns carries a current of 4A. The magnetic flux linkage with the coil is 0.02Wb. Calculate the self-induced emf in the coil. Explain the generation process of 3-phase alternating current Two coils A and B of 500 and 750 turns respectively are connected in secon the same magnetic circuit of reluctance 1.55×10⁶ AT/Wb. Assuming there is no flux leakage, calculate (i) self-inductance of each coil and mutual inductance between coils. | with ries. that (ii) |
| | 6. A conductor of length 0.5m kept at right angles to a uniform magnetic field flux density 2Wb/m² moves with a velocity of 75 m/s at an angle of 60° to field. Calculate the emf induced in the conductor. | |
| C03 | Analyze the frequency response of an RC-coupled amplifier. Identify factors determining the lower and upper cutoff frequencies and explain significance in the amplifier's bandwidth. Analyze the output characteristics of a BJT and find out the significance of BJT's operating regions and their impact on the transistor's functionality different circuit applications. Illustrate with the neat diagram the working of a zener voltage regulator. Analyze potential barrier formation and current in a forward biased junction diode. | their f the ty in |
| C04 | Compare and contrast between AM and FM. Draw and explain the block diagram of FM superheterodyne receiver. With the help of a neat block diagram, explain the principle of operation GSM. Compare the different types of communication technologies. | on of |

MODULE I: Fundamentals of Algorithms (5 Hours)

Problem Solving strategies — Problem analysis — formal definition of problem — Solution — top- down design — breaking a problem into sub problems- overview of the solution to the sub problems by writing step by step procedure (algorithm) - Implementation of algorithms — use of procedures to achieve modularity.

Examples for algorithm - At least 10 problems (starting with non-numerical examples, and numeric problems like factorial, largest among three numbers, largest among N, Fibonacci.

MODULE II: : Variable Expression and Statements (6 Hours)

Introduction to Python-variables, expressions and statements, evaluation of expressions, precedence, string operations

Control statements, Boolean expressions and logical operators, conditional and alternative executions

MODULE III: Functions (6 Hours)

Functions, calling functions, Recursion, composition of functions, mathematical functions, user-defined functions, parameters and arguments.

MODULE IV: List, Dictionary Data Structures (6 Hours)

Strings and lists — string traversal and comparison with examples. List operations with examples tuples and dictionaries — operations and examples, Introduction to numpy, pandas, matplotlib, Files and exceptions - text files, directories, Introduction to classes and objects - attributes, instances (Basics only)

SYLLABUS- DETAILS OF EXPERIMENTS

SECTION – 1 (Electrical Engineering Experiments) Minimum 6 experiments are mandatory

Familiarize with tools and equipment required for wiring; Understand the electrical safety precautions; Identify different types of cables, wires, switches, fuses carriers, MCB, ELCB and MCCB, familiarize the ratings; Demonstrate the Pipe and Plate Earthing Schemes using Charts/Site Visit

Wiring of light circuits (light/ fan point and a 6A plug socket with individual control, Staircase wiring, fluorescent lamp) and power circuit (16 A Power plug socket with a control switch)

Wiring of power distribution arrangement using single phase MCB distribution board with ELCB, main switch and Energy meter.

Familiarization of Rheostat, Step-down Transformers, Measurement and representation of voltage and waveform to scale in graph sheet with the help of CRO; measurement of potential across resistance elements and introducing the concept of relative potential using a DC circuit; Identify battery specifications using different types of batteries

SECTION – 2 (Electronics Engineering Experiments) Minimum 5 experiments are mandatory

Familiarization/Identification of electronic components with specification, Drawing of electronic circuit diagrams using BIS/IEEE symbols, Familiarization/Application of testing instruments and commonly used tools, Testing of electronic components using multimeter

Printed circuit boards (PCB) - Types, Single sided, Double sided, PTH, Processing methods. Design and fabrication of a single sided PCB for a simple circuit. Interconnection methods and soldering practice. Assembling of electronic circuit/system on general purpose PCB, test and show the functioning

Text books

- 2. National Electric Code (NEC) by National Fire Protection Association
- 3. E A Reeves, "Electric Wiring Practices"
- 4. Basic Electronics: Principles and Applications, Chinmoy Saha, Arindham Halder and Debarati Ganguly
- 5. Basic Electronics and Linear Circuits, N N Bhargava D C Kulshreshtha and S. C. Gupta

Reference books

- 1. "Wiring Practices Manual" by International Brotherhood of Electrical Workers
- 2. "Electrical Wiring: A Practical Guide" by J F McPartland

No. Experiments

Electrical Workshop -12 Hrs

(Minimum 6 experiments are mandatory)

a) Identify different types of cables, wires, switches, fuses, fuse carriers, familiarize the ratings. 1 b) Identify the various protection equipment used in electrical wiring (MCB, ELCB/RCCB and MCCB). Wiring of a simple light circuit for two light/ fan points (PVC conduit wiring) and 2 with individual control. 3 Wiring of light/fan circuit using two way switches. (Staircase wiring) 4 Wiring of fluorescent lamp and a plug (6 A) socket with individual control. 5 Wiring of a simple power circuit for 16A power socket with a control switch. Wiring of power distribution arrangement using single phase MCB distribution 6 board with ELCB, main switch and Energy meter. Familiarisation of step up and step down transformers, (use low voltage transformers) 7 Measurement and representation of voltage and waveform to scale in graph sheet with the help of CRO Familiarization of rheostats, measurement of potential across resistance elements 8 and introducing the concept of relative potential using a DC circuit. a) Identify battery specifications using different types of batteries. (Lead acid, Li 9 Ion, NiCd etc.) b) Demonstrate the Pipe and Plate Earthing Schemes using Charts/Site Visit. **Electronics -12 Hrs** (Minimum 5 experiments are mandatory) Familiarization/Identification of electronic components with specification (Functionality, type, size, colour coding, package, symbol and cost of -Active, Passive, Electrical, Electronic, Electro-mechanical, Wires, Cables, Connectors, Fuses, Switches, Relays, Crystals, Displays, Fasteners, Heat sink etc.) Drawing of electronic circuit diagrams using BIS/IEEE symbols and Interpret data sheets of discrete components and IC's Familiarization/Application of testing instruments and commonly used tools. Multimeter, Function generator, Power supply, CRO, DSO. Soldering iron, Desoldering pump, Pliers, Cutters, Wire strippers, Screw drivers, Tweezers, Crimping tool, Hot air soldering and de-soldering station Testing of electronic components using multimeter - Resistor, Capacitor, Diode, Transistor and JFET. Printed circuit boards (PCB) - Types, Single sided, Double sided, PTH, Processing 5 methods. Design and fabrication of a single sided PCB for a simple circuit. 6 Inter-connection methods and soldering practice. Bread board, Wrapping, Crimping, Soldering - types - selection of materials and safety precautions. Soldering practice in connectors and general purpose PCB, Crimping.

Assembling of electronic circuit/system on general purpose PCB, test and show the functioning (Any two)-Fixed voltage power supply with transformer Rectifier using diode Capacitor filter Zener/IC regulator Square wave generation using IC 555 timer in IC base. Introduction to EDA tools. **CO** Assessment Questions CO1 Identify the tools given to you and demonstrate their proper use. CO1 Demonstrate the electrical safety precautions as a team. CO2 Design and develop the wiring as per the given layout and obtain the output. CO3 A team works to fabricate the component as per the given design using available manufacturing methods and submit the report. CO3 Identify the electronic components in the given figure and assemble the component on a circuit board to enable the required function.

Prepared by,

Ms. Drisya K Sasi, Assistant Professor, Department of EEE

Mr. Sebin Davis K, Assistant Professor, Department of EEE

CO4 Implement a simple circuit in a PCB and obtain the output.

Ms. Anju Babu, Assistant Professor, Department of ECE

Ms. Reshma P S, Assistant Professor, Department of ECE

Preamble: This course aims to enhance the communicative English skills of engineering students. The course will cover the four main language skills: listening, reading, writing, and speaking. Students will engage in various activities, including practical sessions in the language lab, to improve their proficiency in English.

Prerequisite: NIL

Course Outcomes: After the completion of the course, the student will be able to

- **CO 1** Improve Listening Skills in English [Apply]
- **CO 2** Enhance Students' Reading Skills in English [Analyze]
- **CO 3** Develop Writing Skills in English [Create]
- **CO 4** Improve Speaking Skills in English [Evaluate]

SYLLABUS

MODULE I: Introduction and Listening Skills (4 hours)

Introduction To the Theory of Communication: Types of Communication, Modes of Communication

Listening Skills: Listening: Importance And Benefits of Listening Skill, Different Types of Listening, Understanding different accents and dialects, Note-taking strategies, Strategies for Improving Listening

MODULE II: Reading Skills (4 hours)

Reading: A Passive Skill – Its Importance, Ten Important Reading Strategies and their Benefits, Skimming and scanning techniques, identifying main ideas and supporting details

MODULE III: Writing Skills (4 hours)

Different Styles of Writing, Fundamentals of English Usages, understanding different types of charts, graphs, and diagrams, describing trends and comparing data Structuring an essay, developing arguments and supporting them with examples, Making Notes and Resumes, Report Writing, Fundamentals of Intonation, Correspondence Writing, Means to Enhance Vocabulary, Content Writing

MODULE IV: Speaking Skills and Integrated Review (8 hours)

Speaking Skills: The Importance of Speaking as an active skill; Grammar, Vocabulary, and Phonetics: Tools of Communicative English Developing fluency and coherence; Pronunciation and stress; Techniques for Effective Public Speaking; Group Discussion and Interview Skills; Presentation Skills; People Skills.

Integrated Skills and Review: Business English, Comprehension, Summary and Paraphrasing, Research Methodology and Documentation

LESSON PLAN FOR LAB COMPONENT

| No. Topic | Горіс | | | | | | |
|--------------|---|---|--|--|--|--|--|
| 1 | Listening practice using audio resources | 4 | | | | | |
| 2 | Reading comprehension exercises and quizzes | 4 | | | | | |
| 3 | Writing practice and peer review | 4 | | | | | |
| 4 | Essay writing/Resume writing/Report writing and feedback sessions | 4 | | | | | |
| 5 | Speaking practice with peers and recording for self-assessment | 8 | | | | | |
| | CO Assessment Questions | | | | | | |

Listening Test: You will have to listen to four recordings (conversations and monologues) and then answer the questions asked. The recordings are of native English speakers, and various accents are used. Remember, you can hear each recording only once.

- **Recording 1:** You will listen to a dialogue in daily life and context.
- **Recording 2:** You will listen to a monologue about everyday life or social context. For instance, a talk on the condition of streets in an area.
- **Recording 3:** You will listen to a conversation between more than two people placed in a training or educational context. For instance, a teacher discusses an assignment with students.
- **Recording 4:** You will listen to a monologue on any academic subject, such as a college lecture.

Answer 6 question types, including:

- Multiple choice
- Matching
- Plan/map/diagram labelling
- Note completion
- Short answer questions

The Reading test is divided into three parts, each featuring a comprehensive passage from contemporary books, journals, magazines, and newspapers. These passages reflect topics relevant to academic and professional environments in English-speaking contexts.

CO 2 Answer 11 question types, including:

- Multiple choice
- Identifying information

CO1

- Note completion
- Matching headings
- Matching sentence endings
- Summary completion
- Sentence completion
- Flow-chart completion
- Part 1: You are presented with a graph, table, chart, or diagram and asked to describe, summarize, or explain the information in your own words. You may be asked to describe and explain data, describe the stages of a process, explain how something works, or describe an object or event.
 - **Part 2:** You are asked to write an essay responding to a point of view, argument or problem.
 - **Part 1:** (4–5 minutes) Introduction and interview. The examiner will ask you to introduce yourself and confirm your identity. Then, the examiner will ask you generic questions about family, studies, work, and interests.
- Part 2: (3–4 minutes) Individual long turn. The examiner will give you a task card with a topic written on it, with some points you may cover in your speech. You will have one minute to think and prepare the topic; a paper and pencil will be provided to jot down your notes. Once done ideating, you will have a time of one to two minutes to speak on the subject, followed by some questions on the same by the examiner.
 - **Part 3:** (4–5 minutes) Two-way discussion. The examiner will ask more questions related to the topic provided in Part 2 of the Speaking test. You can use this opportunity to talk about more ideas.

EDUCATION IS DEDICATION.

|----------|--|---|---|---|---|---|-------------------------|
| | CALCULUS | 3 | 0 | 0 | 0 | 3 | 2024 |

Preamble:

This course introduces the concepts and applications of differentiation and integration of vector valued functions, differential equations, Fourier series and multiple integral. The objective of this course is to familiarize the prospective engineers with some advanced concepts and methods in Mathematics which include the Calculus of vector valued functions and has applications across all engineering domains with the help of modern tools.

MODULE I: Series representation of functions [9hours]

(Text 1: Relevant topics from section 9.3, 9.8

Text 2: Relevant topics from section 11.1,11.2)

Concept of convergence of an infinite series and region of convergence, Series representation of exponential, trigonometric, logarithmic functions (without proofs of convergence), Taylor series representation (without proof, assuming the possibility of power series expansion in appropriate domains), Maclaurin series representation, Fourier series, Euler formulae, Convergence of Fourier series (Dirichlet's conditions), Fourier series of 2π periodic functions, Fourier series of 2π periodic functions, Half range sine series expansion.

MODULE II: Multivariable Calculus-Integration [9hours]

(Text 1: Relevant topics from section 14.1, 14.2, 14.3, 14.5, 14.6)

Double integrals, Reversing the order of integration in double integrals, Change of coordinates in double integrals (Cartesian to polar), Evaluating areas using Double integrals, finding volumes using double integration, Triple integrals, volume calculated as triple integral, Triple integral in cylindrical and spherical coordinates.

MODULE III: Calculus of vector functions [9hours]

(Text 1: Relevant topics from section 12.1, 12.2, 13.6, 15.1, 15.2, 15.3)

Vector valued function of single variable - derivative of vector valued function, Concept

of scalar and vector fields, Gradient and its properties, Directional derivative, Divergence and curl, Line integrals of vector fields, Work done as line integral, Conservative vector field, independence of path, Potential function (results without proof).

MODULE IV: Vector integral theorem [9hours]

(Text 1: Relevant topics from section 15.4, 15.5, 15.6, 15.7)

Green's theorem (for simply connected domains, without proof) and applications to evaluating line integrals, finding areas using Greens theorem. Surface integrals over surfaces of the form z=g(x,y) Flux integrals over surfaces of the form z=g(x,y), Divergence theorem (without proof), Using Divergence theorem to find flux.

| | series converge. | | | | | | | | | |
| | 2. What do you mean by radius of convergence of a power series? | ? How is it | | | | | | | | |
| CO1 | determined? | | | | | | | | | |
| COI | 3. Find the Fourier series of the function $f(x)= x $, which is assum | ed to have | | | | | | | | |
| | the period 2π . Show the details of your work. Sketch or graph | the partial | | | | | | | | |
| | sums up to that including cos 5x and sin 5x. | | | | | | | | | |
| | Teamwork: | | | | | | | | | |
| | Write a MATLAB script to generate the first 10 terms of the Maclau | ırin series | | | | | | | | |
| | for log(1+x). Discuss the behaviour of the series near the end po | | | | | | | | | |
| | interval of convergence. | - 7- | | | | | | | | |
| | 1. Use a triple integral to find the volume of the solid within the cy | linder | | | | | | | | |
| CO2 | $x^2 + y^2 = 9$ and between the planes $z = 1$ and $x + z = 5$. | | | | | | | | | |
| 1 | 1 F | | | | | | | | | |

| | Outline the method for finding the volume of a solid using a double integral. Explain the difference between integrating over a region in the xy-plane versus integrating over a region in the xyz-space. Provide an example of calculating volume using a double integral. Use double integration to find the area of the plane region enclosed by the given curves y = sinx, y = cosx for 0 ≤ x ≤ π/4. Teamwork: Using MATLAB, calculate the area of a circle with a given radius using polar coordinates. |
|-----|--|
| CO3 | Describe the parametric curve represented by the equations x = a cost, y = a sin t, z = ct where a and c are positive constants. Sketch the graph and a radius vector of r(t) = cost i + sin t j , 0 ≤ t ≤ 2π. Given that f_X (-5, 1) = -3 and f_y (-5, 1) = 2, find the directional derivative of f at P (-5, 1) in the direction of the vector from P to Q(-4, 3). Teamwork: |
| | How do you find the tangent and normal vectors to a curve described by a vector valued function? |
| CO4 | Explain the conditions under which Green's Theorem is applicable Use Divergence Theorem to find the outward flux of the vector field F(x, y, z) = x³ î + y³ ĵ + z² k across the surface of the region that is enclosed by the circular cylinder x² + y²= 9 and the planes z = 0 and z = 2. What is the difference between a scalar surface integral and a vector surface integral? Teamwork: Apply Greens theorem to calculate area of an ellipse (major axis-4units, minor) |
| | axis-3units) in MATLAB. |

| SYLLABUS | | | | | | | | | | |
| MODULE I : Semiconductor Physics (9 Hours) | | | | | | | | | | |
| Intrinsic sem | niconduc | tor, | Derivation of | density o | of electro | n in co | nducti | on | band and | |

density of holes in valence band, Intrinsic carrier concentration, Variation of intrinsic carrier concentration with temperature, Extrinsic semiconductor(qualitative),

Formation of pn junction, Fermi level in semiconductors-intrinsic and extrinsic, Energy band diagram of pn junction - Qualitative description of charge flow across a pn junction - Forward and reverse biased pn junctions, Diode equation (Derivation), I-V Characteristics of pn junction, Solar cells- IV Characteristics, Efficiency

MODULE II: Quantum Mechanics & Electromagnetic Theory (9 Hours)

Introduction to quantum Mechanics, Wave Nature of particles, Heisenberg's Uncertainty Principle-Applications, Absence of electron inside the nucleus, Formulation of time-dependent and time-independent Schrodinger equations, Particle in a one- dimensional box - Derivation of energy eigenvalues and normalised wave function,

Magnetic flux density, Magnetic Intensity, Intensity of magnetisation, Permeability, Susceptibility (Qualitative)Laws of magnetism, Classification of magnetic Materials-Para, Dia & Ferro Magnetism, Maxwell's Equations (No Derivation), Velocity of Electromagnetic waves in free space

MODULE III: Dielectrics & Superconductivity (9 Hours)

Dielectric constant, Polarisation, Permittivity & Relative permittivity, Relation between polarisation and dielectric constant, Types of Polarization, Internal fields in liquids and solids, Clausius Mossotti Relation, Dielectric loss(qualitative), Dielectric breakdown (qualitative).

Superconductivity, Transition temperature, Critical field, Meissner effect, Type I and Type II Superconductors. BCS Theory, Applications of Superconductors.

MODULE IV: Laser & Fibre Optics (9 Hours)

Properties of laser, Absorption, Spontaneous emission and stimulated emission, Principle of laser - conditions for sustained lasing - Population inversion, Pumping, Metastable states, Basic components of laser - Active medium, Energy source, Optical resonant cavity, Construction and working of Ruby laser, Applications of laser.

Optical fibre-Principle of propagation of light, Types of fibres-Step index and Graded index fibres, Multimode, Single mode; Acceptance angle, Numerical aperture – Derivation, Applications of optical fibres - Fibre optic communication system (block diagram)

(Any 2 experiments from each topic to be completed)

CO Assessment Questions

| | , |
|-----|--|
| CO1 | Explain the variation of intrinsic carrier concentration with temperature. Derive the density of electrons in the conduction band and the density of holes in the valence band in the intrinsic semiconductor. Explain the energy band diagram of the pn junction. Explain the construction and working of a solar cell and draw its V-I characteristics. |
| CO2 | Give the physical significance of wave function? Write down the Schrodinger equation for a particle in a one dimensional infinite square well potential and also derive the equation for normalised wave function and energy eigenvalues for a particle in 1 D Box. Compare the properties of paramagnetic, diamagnetic and ferromagnetic materials with two examples for each. A magnetizing field of 1800 A/m produces a magnetic flux of 3 x 10 -5 Wb in an iron bar with a cross-sectional area of 0.2 cm². Calculate the permeability. |
| CO3 | Define Dielectric constant and polarisation also derive the relation between them. When NaCl crystal is subjected to an electric field of 50V/cm. the resulting polarization is 2.215 x 10 -7 C/cm². Calculate relative permittivity of NaCl. What is the Meissner effect? Show that a superconductor is a perfect diamagnet. Distinguish between type I and type II superconductors with suitable diagrams and examples. |
| CO4 | Distinguish between spontaneous and stimulated emission. Explain the construction and working of a ruby laser with schematic and energy level diagrams. Determine the Numerical Aperture of an optic fibre cable. The numerical aperture of an optic fibre is 0.295, and the refractive index of the core is 1.54. Calculate the refractive index of cladding and acceptance angle. |
| CO5 | Draw the V-I Characteristics of Zener Diode Determine the size of lycopodium powder using a laser. Determine the wavelength of a laser source using a diffraction grating arrangement. Determination of the Numerical Aperture and acceptance angle of an optic fibre cable. |

SYLLABUS

MODULE I: Introduction to Engineering Drawing and Orthographic Projection of Points and Lines (11 Hours)

Introduction: Relevance of technical drawing in engineering field. Types of lines, Dimensioning, BIS code of practice for technical drawing. (No questions for the end semester examination)

Projection of points in different quadrants, Projection of straight lines inclined to one plane and inclined to both planes. Traces of a line. Inclination of lines with reference planes True length and true inclinations of line inclined to both the reference planes.(Questions limited to Lines in first quadrant, lines in first & second quadrants, lines in first & third quadrants, Lines in third quadrant)

MODULE II: Orthographic Projections of Solids (10 Hours)

Projection of Simple solids such as Triangular, Rectangle, Square, Pentagonal and Hexagonal Prisms, Pyramids, Cone, Cylinder and tetrahedron. Projection of solids in simple position. Projection of solids with axis inclined to one of the reference planes and with axis inclined to both reference planes.

MODULE III: Section of solids and Development of Surfaces (10 Hours)

Sections of Solids: Sections of tetrahedron, Prisms, Pyramids, Cone, Cylinder with axis in vertical position and cut by different section planes. True shape of the sections. (Exclude true shape given problems)

Development of Surfaces: Development of surfaces of the solids and solids cut by different section planes with axis of the solid perpendicular to HP. (Exclude problems with through

holes and shortest distance between two points)

MODULE IV: Isometric Projection and Multi-view Projection (5 Hours)

Isometric Projection: Isometric scale- Isometric View and Projections of Prisms, Pyramids, Cone, Cylinder, Frustum of Pyramid, Frustum of Cone, Sphere, Hemisphere and their combinations.

Multi view Projection- Conversion of pictorial views to orthographic view(F.V,T.V & S.V)

| | above HP and 40mm in front of VP. Its front view and top view | | | | | | | | | | |
| | angle of 40° and 45° respectively with XY- line. Draw the projection | | | | | | | | | | |
| | true length and true inclinations with HP and VP, and locate its | | | | | | | | | | |
| | line is in the first quadrant. | duces, file | | | | | | | | | |
| | | of 500 with | | | | | | | | | |
| | 2 The front view of a line AB measures 70mm and makes an angle | | | | | | | | | | |
| | XY-line. The end A is in the HP and the VT of the line is 30mm ab | | | | | | | | | | |
| | line is inclined at 40° to the VP. Draw the projections of the line, | iina its true | | | | | | | | | |
| CO1 | length and true inclination to HP, and locate its HT. | | | | | | | | | | |
| | 3 One end point of line AB is 12 mm above HP and is 15 mm in from | | | | | | | | | | |
| | other endpoint is 50 mm above HP and is 42 mm in front of V | P. Draw the | | | | | | | | | |
| | projections of line AB if its elevation measures 70 mm. Find out its true lengt | | | | | | | | | | |
| | and the true inclinations with respect to the reference planes. | | | | | | | | | | |
| | 4 A cone of base diameter 40 mm and axis 60 mm long touches the VP or | | | | | | | | | | |
| | point of its base circle. The axis is inclined at 30° to VP and the fi | | | | | | | | | | |
| | its axis is inclined at 45° to XY line. Draw its projections. | | | | | | | | | | |
| | - ' | ng on HP on | | | | | | | | | |
| | 5 A square pyramid of base edge 30 mm and height 60 mm is resting on HP on its triangular face such that the square face edge on HP is inclined 30° to VP. | | | | | | | | | | |
| | | | | | | | | | | | |

| | Draw its projections. A pentagonal prism 30 mm base edge and 60 mm height is on HP on one of its base edges so that the axis is inclined at 45° with HP and the base edge of which it rests is inclined at 30° with VP. Draw the projections of the solid. | |
|-----|--|-----------------------|
| CO2 | A pentagonal pyramid side of base 30 mm, height 65 mm has its base on the ground and one of its base edge is parallel to and nearer to VP. This pyramic is cut by a section plane perpendicular to VP, passing through a point on the axis which is 20 mm below the apex and making an angle of 40° with H Draw the front view, sectional top view and true shape of the section. A hexagonal prism of base side 35 mm and height 65 mm rests on its base of HP with one of the base edges parallel to VP. It is cut by a section plan inclined towards right at an angle of 30° to HP and perpendicular to VP. The section plane meets the axis of the prism at a height of 45 mm from the base Draw the front view, sectional top view, and true shape of the section. A pentagonal prism of base 30 mm and axis 60 mm long is kept with its base on HP with a base edge perpendicular to VP. It is cut by a plane inclined a 45° to HP, perpendicular to VP and passing through the midpoint of the axis Draw the development showing the remaining portion of the solid. | id he IP. |
| | 1. A hemisphere of diameter 60 mm is placed centrally over a square slab of side 50mm and height 40 mm, with its flat surface facing upward. Draw the | |
| CO3 | isometric view of the combination 2. A hexagonal pyramid of base edge 25 mm and height 40 mm is surmounted centrally over a cube of 50 mm side. The cube is lying on HP on one of it square faces so that one base edge of the cube and one base edge of the pyramid are parallel to VP. Draw the isometric view of the combination. 3. Draw the orthographic projections (front view, top view, and left side view of the following figure. The front view direction is marked with a long arrowmarking as X. Any missing dimension may be suitably assumed. A dimensions are in mm | ed its he w) |

| Preamble: | The syllabus is prepared with the vie | w (| of p | rep | arin | g th | ne Engineering |

Preamble: The syllabus is prepared with the view of preparing the Engineering Graduates capable of writing readable C programs to solve computational problems that they may have to solve in their professional life. The course content is decided to cover the essential programming fundamentals which can be taught within the given slots in the curriculum.

Prerequisite: NIL

P01

PO2

CO

Course Outcomes: After the completion of the course the student will be able to

- **CO 1** Analyze a computational problem and develop an algorithm/flowchart to find its solution. [Analyze]
- CO 2 Develop readable C programs with branching and looping statements, which uses Arithmetic, Logical, Relational or Bitwise operators. [Understand]
- **CO 3** Write readable C programs with arrays, string, structure or union for storing the data to be processed and develop a readable multi-function C program by using recursion if required, to find the solution to the computational problem **[Apply]**
- Write readable C programs which use pointers for array processing and parameter passing and operation in files. [Apply]

31LLADU3

MODULE I: Basics of Computer Hardware and Software (7 Hours)

Processor, Memory, Input& Output devices,

Application Software & System software: Compilers, interpreters, High level and low-level languages Introduction to structured approach to programming, Flow chart Algorithms, Pseudo code (bubble sort, linear search - algorithms and pseudocode

MODULE II: Program Basics (8 Hours)

Basic structure of C program: Character set, Tokens, Identifiers in C, Variables and Data Types, Constants, Console IO Operations, printf and scanf

Operators and Expressions: Expressions and Arithmetic Operators, Relational and Logical Operators, Conditional operator, size of operator, Assignment operators and Bitwise Operators. Operators Precedence

Control Flow Statements: If Statement, Switch Statement, Unconditional Branching using goto statement, While Loop, Do While Loop, For Loop, Break and Continue statements. (Simple programs covering control flow)

MODULE III: Arrays, Strings and Functions (13 Hours)

Arrays: Arrays Declaration and Initialization ,1-Dimensional Array, 2-Dimensional Array

String processing: In built String handling functions (strlen, strcpy, strcat and strcmp,

puts, gets) **Introduction to modular programming**: writing functions, formal parameters, actual parameters Pass by Value, Recursion, Arrays as Function Parameters structure, union, Storage Classes, Scope and lifetime of variables, *simple programs using functions*

MODULE IV: Pointers and Files (9 Hours)

Pointers: Declaring pointers, accessing data though pointers, NULL pointer, array access using pointers, pass by reference effect

File Operations: open, close, read, write, append, Sequential access and random access to files: In built file handling functions (rewind(), fseek(), ftell(), feof(), fread(), fwrite()), simple programs covering pointers and files.

| No. | Topic | No. of | Experiment (8 Programs Mandato | rvì | |
| | 10010 | Hours (24) | ATION IS DEDICATION | -9) | |
| 1. | Familiarization of Hardware Components. Familiarization of Linux environment | 2 | Familiarization of Hardware Compon Computer Familiarization of Linux environment - do Programming in C with Linux | | |
| 2. | Familiarization of console I/O and operators in C | 2 | Familiarization of console I/O and operato i) Display "Hello World" ii) Read two numbers, add them an their sum iii) Read the radius of a circle, cal area and display it | ıd display | |
| 3. | Basic structure of C program. Operators and Expressions | 2 | Read 3 integer values and find the large them. Read a Natural Number and check wh number is prime or not | | |

| 4. | Arrays & Strings | 4 | Read n integers, store them in an array and find their sum and average Read two strings (each one ending with a \$ symbol), store them in arrays and | | |
|-----|--|-------|--|--|--|
| 5. | Structure, Union | 3 | concatenate them without using library functions. Read two input each representing the distances between two points in the Euclidean space, store these in structure variables and add the two distance values. Using structure, read and print data of n employees (Name, Employee Id and Salary) | | |
| 6. | Simple programs using functions | 3 | Find the factorial of a given Natural Number n using recursive and non-recursive functions | | |
| 7. | Simple programs using Pointer | 4 | Do the following using pointers i) add two numbers ii) swap two numbers using a user defined function | | |
| 8. | File Operations | 4 | Create a file and perform the following i) Write data to the file ii) Read the data in each file & display the file content on console iii) append new data and display on console | | |
| | | CO As | sessment Questions | | |
| CO1 | Write short note on processor and memory in a computer. What are the differences between compiled and interpreted languages? Give example for each. With the help of a flow chart, explain the bubble sort operation. Illustrate with an example Display "Hello World" Program | | | | |
| CO2 | Write a C program to read a Natural Number through keyboard and to display the reverse of the given number. For example, if "3214567" is given as input, the output to be shown is "7654123". Is it advisable to use <i>goto</i> statements in a C program? Justify your answer. With suitable examples, explain various operators in C. Read the radius of a circle, calculate its area and display it | | | | |
| CO3 | 1. Write a function in C which takes a 2-Dimensional array storing a matrix of numbers and the order of the matrix (number of rows and columns) as arguments and displays the sum of the elements stored in each row. | | | | |

| | 4. Find the factorial of a given Natural Number n using recursive and |
|-----|--|
| | non-recursive functions |
| CO4 | With an example, explain the different modes of opening a file. Differentiate between sequential files and random-access files? Using the prototypes explain the functionality provided by the following functions. i)(rewind(), ii)fseek() iii)ftell(), iv) fread(), v) fwrite() With a suitable example, explain the concept of pass by reference. Create a file and perform the following i) Write data to the file ii) Read the |
| | in each file & display the file content on console iii) append new data and on console |

| | | MO | DIII E I | Introduction | on to Anato | my & Dhyci | ology | | | |

MODULE I: Introduction to Anatomy & Physiology

Introduction to Human body and cellular structure: Definitions, structural & functional organization of human body –cells, tissues, organs & systems, Cell: Basic structure, organelles & their functions. Cell membrane – structure, transport across cell membranes- active and passive transport.

Musculoskeletal system (Project Based Learning): Types of muscles- cardiac and smooth muscles, mechanism of muscle contraction. Functions of skeletal system, Bone – classification & composition, structure of long bone – compact and spongy bone. Joints in the human body – classification and possible movements.

MODULE II: Nervous System

Nervous System: General organization, Neurons – structure & types, Central nervous system – Brain - structure and functions of each part, Spinal cord - structure – spinal and cranial nerves, spinal reflex, Brain Stem – basic structure & functions. Peripheral nervous system: Efferent & afferent division. Autonomic nervous system: Sympathetic & Parasympathetic nervous system. Special senses –Organ of vision, hearing & equilibrium, taste and smell –structure & basic mechanisms.

MODULE III: Cardiovascular System

Cardiac Muscle: The Heart as a Pump and functions of the Heart Valves-Rhythmical Excitation of the Heart- Normal Electrocardiogram-Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow, Cardiac Arrhythmias and their Electrocardiographic interpretation

Circulatory System: Biophysics of circulatory system: Biophysics of Pressure, Flow, and Resistance-The Microcirculation and Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph flow. Introduction on Heart Valves and Heart Sounds; Valvular and Congenital Heart Defects- Basics- Cardiac failure

MODULE IV: Respiratory System

Respiratory system- Structure of lungs- Mechanics of respiration- Lung volume and capacities- Physical Principles of Gas Exchange; Diffusion of Oxygen and Carbon Dioxide through the Respiratory Membrane. Respiratory Insufficiency- Pathophysiology, Diagnosis, Oxygen Therapy- Pulmonary Abnormalities- Hypoxia and Hypercapnia.

Urinary System-Structure and function of organs-Kidneys-Nephron-Renal Function-Process involved in urine formation, Micturition, Body fluids, Acid-Base balance.

| 1 | Preliminary Design of the Project | 2 |
| 2 | Zeroth presentation (4th week) | 2 |
| 3 | Project work - First Phase | 2 |
| 4 | Interim Presentation | 2 |
| 5 | Project work - Final Phase & Report writing | 2 |
| | (discussions in class during project hours) | |
| 6 | Final Evaluation, Presentation and Exhibition (11th and 12th weeks) | 3 |
| | CO Assessment Questions | |
| CO1 | What are the main components of the structural and functional of the human body? How does the cell membrane facilitate transport across cell mem What are the differences between active and passive transport membranes? What are the types of muscles found in the human body, and differ? Explain Cardiac Cycle in detail using a diagram that includes vol | branes? rt across cell how do they |
| CO2 | and pressure changes. What role does pressure play in the functioning of the heart and to of blood throughout the circulatory system What are the principles behind the interaction between blood vessel walls in the circulatory system? How does fluid dynamics explain the flow of blood through the a and capillaries? | he movement |
| C03 | Mention the functions of Sodium - Potassium pump? What are the primary muscles involved in the process of insexpiration? What role do pressure differences play in the movement of air in the lungs? How does the diaphragm contribute to the mechanics of breathing. | nto and out of |
| C04 | Summarize fluid and electrolyte balance of the urinary system. Identify the role of clinical consultation and literature survey in p to Anatomy and Physiology What are the ethical aspects involved in project related to healthough. What is the relevance of simulations in the understanding of Hurand Physiology | care scenarios |

| Preamble: Engineering Ethics enables students to explore the ethical principles and responsibilities of engineers in their professional practice, using real-world case studies. Sustainable Development transform our world, recognize interdependence, enhance quality of life, enhance human responsibilities, eliminate pollution, conserve natural resources and uplift human-nature coexistence. Relevant case studies impart students, effective ways to practically apply their skills and their understanding of learned facts to a real-world situation. The presentation of case studies will provide an opportunity to read, understand and prepare technical report about sustainable, professional and socially responsible projects. | | | | | | | | | | | | | | |

SYLLABUS

MODULE 1

Introduction to Professional Ethics-Morals, Values and Ethics, Personal and Professional ethics

Key ethical Principles-Honesty, integrity, respect, responsibility

Moral Development Theories (Kohlberg's theory, Gilligan's theory)

Case studies on professional responsibility (Hyatt Regency Walkway Collapse, Ethical consideration in the design and deployment of autonomous vehicle)

MODULE 2

Engineering as Experimentation – Engineers as responsible Experimenters-Engineers as Managers, Consulting Engineers, Engineers as Expert witnesses and advisors Codes of Ethics- Plagiarism-Professional Rights-Employee right- IPR Discrimination. Ethical challenges posed by emerging technologies

Case Studies on emerging technologies (Artificial Intelligence)

MODULE 3

Introduction to Sustainable Development- Concept of Sustainability- pillars of sustainability- social- economic -environmental sustainability.

MDG - SDG- Nexus between Technology and sustainable development.

Case studies on SDGs. Case studies on Nexus between Technology and Sustainable development.

MODULE 4

Pathways for sustainable development - Social aspects - poverty- hunger - health - education- gender equality. Economic aspects- society- consumers - industries. Environmental aspects - renewable energy- zero waste - Carbon emission- conservation

of ecosystem- global environmental issues Case studies on Sustainable habitat, Sustainable Industry

SYLLABUS-DETAILS OF EXPERIMENTS

SECTION – 1 (Manufacturing Lab Experiments) Minimum 5 experiments are mandatory

General study of manufacturing process – Foundry – Sheet metal – Fitting – Welding – Metrology – Modern manufacturing method – Power tools.

SECTION – 2 (CAD Lab Experiments) Minimum 5 experiments are mandatory

Introduction to Computer Aided Drawing (CAD) - 2D Drafting - 3D Modeling

Textbooks

- 1. Mechanical Workshop Practice, K C John PHI Learning Edition 2, 2010
- 2. Engineering Materials, S C Rangwala Charotar Publishing House Pvt Limited Edition 43, 2019
- 3. Engineering Graphics Essentials with AutoCAD 202x Instruction Kirstie Plantenberg ,SDC Publication 2023

Reference Books

- 1. Elements of Workshop Technology Vol-1-Manufacturing Processes S K Hajra Choudhury A K Hajra Choudhury Nirjhar Roy MPP Media Promoters and Publishers2008
- 2. AutoCAD 3D Modeling: Exercise Workbook Steve Heather Industrial Press Inc., U.S.

LIST OF EXPERIMENTS

| | Manufacturing - 12Hrs (Minimum 5 experiments are mandatory) | | |
|-----|--|--|--|
| No. | Experiments | | |
| 1 | General-Introduction to workshop practice – safety precautions – Basic first aid knowledge – Study of workshop tools | | |
| 2 | Welding- Understanding arc welding process and components – Experiment on horizontal bead formation. | | |
| 3 | Metrology- Common measuring instruments used in workshop, experiments to measure using instruments like Vernier Caliper, micrometer, Vernier Height Gauge (Ordinary & Digital). | | |
| 4 | Modern manufacturing method-3D printing | | |
| 5 | Power Tools-Demonstration of the following power tools – Portable DC inverter welding set, portable power planer, Portable jig saw machine, Portable circular saw, Portable Drilling machine, Angle grinder. | | |
| 6 | Foundry- Understanding of foundry tools – Experiment on Bench moulding. | | |
| 7 | Fitting- Understanding the tools used for fitting and knowledge of at least one model | | |

| CAD LAB - 12Hrs (Minimum 5 experiments are mandatory) Computer Aided Drawing (CAD): Introduction, Role of CAD in design development of new products, Advantages of CAD. 2D Drawing Exercise I: Introduction to common drafting tools and annotations. 2 D Drawing Exercise II: Introduction to common modification tool | | | | |
|---|---|--|--|--|
